Fitness Workout Review:

It's Not Just Gym Anymore Bane McCracken, 2001 This book doesn't just help students recognize and learn physical skills and understand why physical activity and fitness are important. It also keeps them motivated by showing them that they don't have to be athletic to be fit and by presenting more diverse activities that they can continue to enjoy as adults such as walking, running, group fitness, outdoor adventure, golf, tennis, skiing, mountain biking, bow hunting, fly fishing, and weight training.

Insights into the Effectiveness of Exercise/Lifestyle Recommendations in Primary Care Tatsunori Ikemoto, Carol Ewing Garber, Patricia C. Heyn, 2023-10-23 The World Health Organization (WHO) reported that physical activity is one of the leading risk factors for non-communicable disease deaths worldwide. Several studies have shown that physical activity can reduce the risk of conditions such as heart disease, stroke, and diabetes. Furthermore, exercise has been found to be beneficial in certain mental health conditions and improving the quality of life in patients undergoing cancer treatment. However, WHO estimates that 1 in 4 adults worldwide are not physically active enough. This has led to the development of the WHO global action plan on increasing physical activity, which includes integrating physical activity into primary health care. Globally, primary care professionals are already prescribing lifestyle changes, including those aimed at increasing physical activity. Examples of this include prescription of gym memberships and initiatives that aim to better educate physicians on the benefits of physical activity on patient health. This research topic aims to discuss the effectiveness of exercise/lifestyle recommendations in improving patient outcomes in primary care. Assessing physical activity in primary care practice. The use of exercise prescription to manage neurological diseases. The uptake of patients completing a recommended exercise plan and what can be done to increase this. The importance of communication between the patient and physician in implementing the exercise plan and how this could be improved. Confounding factors that affect the patient in following an exercise plan/lifestyle recommendation. Examples of where exercise recommendations by primary health care professionals have been successfully implemented in a real-world setting. Examples of successful clinical and community collaborations with allied health professionals such as exercise physiologists.
