Parliament. House of Lords,1847 **South Africa Yearbook** ,2009 *Quantum Structures in Cognitive and Social Science* Diederik Aerts,Jan Broekaert,Liane Gabora,Sandro Sozzo,2016-06-26 Traditional approaches to cognitive psychology correspond with a classical view of logic and probability theory More specifically one typically assumes that cognitive processes of human thought are founded on the Boolean structures of classical logic while the probabilistic aspects of these processes are based on the Kolmogorovian structures of classical probability theory However growing experimental evidence indicates that the models founded on classical structures systematically fail when human decisions are at stake These experimental deviations from classical behavior have been called paradoxes fallacies effects or contradictions depending on

the specific situation where they appear But they involve a broad spectrum of cognitive and social science domains ranging from conceptual combination to decision making under uncertainty behavioral economics and linguistics This situation has constituted a serious drawback to the development of various disciplines like cognitive science linguistics artificial intelligence economic modeling and behavioral finance A different approach to cognitive psychology initiated two decades ago has meanwhile matured into a new domain of research called quantum cognition Its main feature is the use of the mathematical formalism of quantum theory as modeling tool for these cognitive situations where traditional classically based approaches fail Quantum cognition has recently attracted the interest of important journals and editing houses academic and funding institutions popular science and media Specifically within a quantum cognition approach one assumes that human decisions do not necessarily obey the rules of Boolean logic and Kolmogorovian probability and can on the contrary be modeled by the quantum mechanical formalism Different concrete quantum theoretic models have meanwhile been developed that successfully represent the cognitive situations that are classically problematical by explaining observed deviations from classicality in terms of genuine quantum effects such as contextuality emergence interference superposition entanglement and indistinguishability In addition the validity of these quantum models is convincingly confirmed by new experimental tests We also stress that since the use of a quantum theoretic framework is mainly for modeling purposes the identification of quantum structures in cognitive processes does not presuppose without being incompatible with it the existence of microscopic quantum processes in the human brain In this Research Topic we review the major achievements that have been obtained in quantum cognition by providing an accurate picture of the state of the art of this emerging discipline Our overview does not pretend to be either complete or exhaustive But we aim to introduce psychologists and social scientists to this challenging new research area encouraging them at the same time to consider its promising results It is our opinion that if continuous progress in this domain can be realized quantum cognition can constitute an important breakthrough in cognitive psychology and potentially open the way towards a new scientific paradigm in social science

The Monthly Literary Advertiser ,1855      **Bent's Literary Advertiser and Register of Engravings, Works on the Fine Arts** ,1855      *Platonic Conversations* Mary Margaret McCabe,2015 M M McCabe presents a selection of her essays which explore the ways in which the Platonic method of conversation may inform how we understand both the Platonic dialogues and the work of his predecessors and his successors The centrality of conversation to philosophical method is taken here to account both for how we should read the ancients and for the connections between argument knowledge and virtue in the texts in question The book argues that we should attend consequently to the reflective dimension of reading and thought and that this reflection explains both how we should think about the conditions for perception and knowledge and how those conditions in turn inform the theories of value of both Plato and Aristotle      **Sound change, priming, salience** Marten Juskan,2018-10-17 This volume investigates the realisation and perception of four phonological variables in Liverpool

English Scouse with a special focus on their sociolinguistic salience Younger speakers speech is found to be more local but only for the two salient variables in the sample NURSE SQUARE and k lenition which appear to carry considerable amounts of covert prestige Local variants of non salient happy tensing and velar nasal plus on the other hand are actually found to be receding so at least to a certain extent Scouse also seems to be participating in regional dialect levelling The importance of salience is also obvious in the perception data with only the two highly salient stereotypes generating robust effects in a social priming experiment albeit in the unexpected direction These results indicate that the investigated variables differ measurably not only in their use in production but also in terms of how central they are to mental sociolinguistic representations of Scouse They also tell us more about the way we process store and re use sociolinguistic variation in perception By defining likely contexts for significant priming effects they might finally even help in coming up with a more elaborate
