

Accounting Cycle

The accounting cycle is a systematic process used to help perform the basic function of accounting, which is to identify, record, and communicate information. A business or organization may have its own unique way of performing its accounting cycle, but each must perform the task in one way or another. Alvarez Bookkeeping Services, a small family operated business, has a very simplified version of the accounting cycle. The company was established in 1971 and is located in Flushing, NY.

The company is consists of four employees this includes the owner. One person, the owner, performs the entire accounting cycle for the Alvarez Bookkeeping Services. Gradually, the accounting cycle has evolved much like business have evolved; the multiple steps have been reduced as technology has simplified the process, "today, most companies use accounting software that processes many of these steps simultaneously" (Averkamp, n. d. , para. 3).

The accounting cycle consists of: identifying, journalizing, posting, trail balance, adjusted entries, adjusted trial balance, preparing financial statements, closing, post-closing trial balance, reversing entries, and financial statements (Kieso, Weygandt, & Warfield, 2007). Identifying a transaction or event is the first step in the cycle; businesses engage in various activities on a daily, as a result, determining when to record and activity is crucial. Once the activity is identified a transaction must be recorded, the next step is to journalize the transaction.

The journalizing process can be completed in a variety of ways; the most common method is the general journal, although some companies keep other special journals. The next step in the accounting cycle is posting, which is the procedure of transferring journal entries to the ledger accounts (Kieso et al. , 2007), so that the transactions reflect in the appropriate ledger accounts balances. After the transactions from the general journal have passed to the general ledger a trail balance can be performed. The trial balance "lists accounts and their balances at a given time" (Kieso et al.

, 2007, pg. 74), which is very useful in detecting errors that may have occurred during recording or posting. In the event an error is detected or a transaction is missing, an adjusting entry is made. Adjusting entries may also be made to update an account, such as prepaid accounts. For instance, a company may have pre-paid insurance on its books as assets, at the end of the period an adjusting entry is made to reflect what is prepaid and what an expense is. Often times a trial balance is done after the adjusting entries are made just to be sure everything is still in balance.

At this point in the accounting cycle, the financial reports are typically generated, the most common are the: balance sheet, income statement, and retained earnings. The accounting

Three Essays on Productivity (RLE: Business Cycles) Mark J. Lasky, 2015-03-27 The behaviour of US productivity since this book was originally published in 1994 has added new relevance to the relationship between profits and productivity In the long run productivity growth determines the economic standard of living This book is divided into three parts the basis of the first is the empirical finding that controlling for normal business cycle effects productivity grows faster when profits have been low than otherwise The second part discusses how to measure marginal cost using time series data and the third tests a basic assumption that productivity growth is exogenous to labour and capital

Essays on Saving, Bequests, Altruism, and Life-cycle Planning Laurence J. Kotlikoff, 2001-06-22 This collection of essays coauthored with other distinguished economists offers new perspectives on saving intergenerational economic ties retirement planning and the distribution of wealth The book links life cycle microeconomic behavior to important macroeconomic outcomes including the roughly 50 percent postwar decline in America's rate of saving and its increasing wealth inequality The book traces these outcomes to the government's five decade long policy of transferring in the form of annuities ever larger sums from young savers to old spenders The book presents new theoretical and empirical analyses of altruism that rule out the possibility that private intergenerational transfers have offset those by the government While rational life cycle behavior can explain broad economic outcomes the book also shows that a significant minority of households fail to make coherent life cycle saving and insurance decisions These mistakes are compounded by reliance on conventional financial planning tools which the book compares with Economic Security Planner ESPlanner a new life cycle financial planning software program The application of ESPlanner to U S data indicates that most Americans approaching retirement age are saving at much lower rates than they should be given potential major cuts in Social Security benefits

Essays on a Mature Economy: Britain After 1840 Deirdre McCloskey, 2013-11-05 These unique papers were originally read at a conference on the new economic history of Britain at Harvard in 1970 and each is accompanied by a summary of the discussion that followed it The participants of the conference represented a broad range of scholars from both sides of the Atlantic The first eleven papers deal with a variety of topics covering a period from 1840 to the 1920s They focus on the performance of the British economy and especially its businessmen during the time of Britain's industrial maturity and relative decline The papers and discussions reached a novel conclusion the contrary to commonly held opinion the British economy performed well and that British businessmen were not lacking in entrepreneurial vigour

compared with their German or American counterparts But even more important for British historiography than this finding was the demonstration that economic and statistical methods can be applied successfully to the study of economic history The papers in the concluding section discuss the origins and development of the new economic history and show that as a substantial supplement to work along more traditional lines its methods and application are both desirable and possible This collection serves as an interesting report of research into a key period in British history and also as a useful introductory account of the new economic history in the United Kingdom This book was first published in 1971 Essays on the Song Cycle and on Defining the Field ,2022-07-18 This volume assembles twelve interdisciplinary essays that were originally presented at the Second International Conference on Word and Music Studies at Ann Arbor MI in 1999 a conference organized by the International Association for Word and Music Studies WMA The contributions to this volume focus on two centres of interest The first deals with general issues of literature and music relations from culturalist historical reception aesthetic and cognitive points of view It covers issues such as conceptual problems in devising transdisciplinary histories of both arts cultural functions of opera as a means of reflecting postcolonial national identity the problem of verbalizing musical experience in nineteenth century aesthetics and of understanding reception processes triggered by musicalized fiction The second centre of interest deals with a specific genre of vocal music as an obvious area of word and music interaction namely the song cycle As a musico literary genre the song cycle not only permits explorations of relations between text and music in individual songs but also raises the question if and to what extent words and or music contribute to creating a larger unity beyond the limits of single songs Elucidating both of these issues with stimulating diversity the essays in this section highlight classic nineteenth and twentieth century song cycles by Franz Schubert Robert Schumann Hugo Wolf Richard Strauss and Benjamin Britten and also include the discussion of a modern successor of the song cycle the concept album as part of today s popular culture **Essays on Economic Psychology** Hermann Brandstätter,Werner Güth,2012-12-06 Economic behavior is explored from a psychological perspective by both prominent economic psychologists with a long tradition in studying economic problems as well as economists who are open and interested in the psychological aspects of economic behavior The contributions discuss the prospects and difficulties of this dialogue between psychology and economics and survey some important areas of research where such an interdisciplinary approach has proved to be successful The text can also be used to introduce psychology to economists in order to give them an idea how to analyze economic problems from a psychological perspective It also indicates many urgent and exciting research topics awaiting eager scholars to carry on the dialogue
