McAndrews,2018-08-22 Declaring a War on Poverty in 1964 President Lyndon Baines Johnson proclaimed We shall not rest until that war is won Since then nine presidents have come and gone each taking up the campaign in his own way but the poor are still here While all of these presidents have helped produce meaningful changes in the lives of the nation s underclass their setbacks have been at least as notable as their successes The Presidents and the Poor asks why This book is the first thorough study of the policies and politics of the presidents from Johnson to Barack Obama what they did right and how they went wrong in over half a century of fighting poverty Many factors conspired to frustrate Democratic efforts to escalate Johnson s War on Poverty and Republican attempts to unravel it the rivalry of the two party system the frequency of congressional elections the fluctuations of the economy the demands of foreign policy the inertia of the federal bureaucracy the tensions among cities states and Washington DC and the priorities of the presidents the press and the public Examining how each president tried to alleviate the suffering of the poor including what resources he marshaled for which programs policies legal strategies and political maneuvers Lawrence J McAndrews details how and why none of the presidents were able to surmount the enormous socioeconomic political and cultural barriers to eradicating poverty Comprehensive and engaging rich in primary research and sobering in its conclusions his book brings much needed attention and clarity to an enduring yet too often neglected problem *British Naval Intelligence through the Twentieth Century* Andrew Boyd,2020-08-30 This is the first comprehensive account of how intelligence influenced and sustained British naval power from the mid nineteenth century when the Admiralty first created a dedicated intelligence department through to the end of the Cold War It brings a critical new dimension to our understanding of British naval history in this period while setting naval intelligence in a wider context and emphasising the many parts of the British state that contributed to naval requirements It

is also a fascinating study of how naval needs and personalities shaped the British intelligence community that exists today and the concepts and values that underpin it The author explains why and how intelligence was collected and assesses its real impact on policy and operations It confirms that naval intelligence was critical to Britain's survival and ultimate victory in the two World Wars but significantly reappraises its role highlighting the importance of communications intelligence to an effective blockade in the First and according Ultra less dominance compared to other sources in the Second It reveals that coverage of Germany before 1914 and of the three Axis powers in the interwar period was more comprehensive and effective than previously suggested and while British power declined rapidly after 1945 the book shows how intelligence helped the Royal Navy to remain a significant global force for the rest of the twentieth century and in submarine warfare especially in the second half of the Cold War to achieve influence and impact for Britain far exceeding resources expended This compelling new history will have wide appeal to all readers interested in intelligence and its crucial impact on naval policy and operations

Struggle for Change Marvin T. Chiles, 2023-12-28 A Black majority city with a history of the most severe segregation and inequity Richmond is still grappling with this legacy as it moves into the twenty first century Marvin Chiles now offers a unique take on Richmond's racial politics since the civil rights era by demonstrating that the city's current racial disparities in economic mobility housing and public education actually represent the unintended consequences of Richmond's racial reconciliation measures He deftly weaves municipal politics together with grassroots efforts examining the work and legacies of Richmond's Black leaders from Henry Marsh on the city council in the 1960s to Mayor Levar Stoney to highlight the urban revitalization and public history efforts meant to overcome racial divides after Jim Crow yet which ironically reinforced racial inequality across the city Compellingly written this project carries both local and broader regional significance for Richmonders Virginians southerners and all Americans

How We Teach Science John L. Rudolph, 2019-06-01 A former Wisconsin high school science teacher makes the case that how and why we teach science matters especially now that its legitimacy is under attack Why teach science The answer to that question will determine how it is taught Yet despite the enduring belief in this country that science should be taught there has been no enduring consensus about how or why This is especially true when it comes to teaching scientific process Nearly all of the basic knowledge we have about the world is rock solid The science we teach in high schools in particular laws of motion the structure of the atom cell division DNA replication the universal speed limit of light is accepted as the way nature works Everyone also agrees that students and the public more generally should understand the methods used to gain this knowledge But what exactly is the scientific method Ever since the late 1800s scientists and science educators have grappled with that question Through the years they've advanced an assortment of strategies ranging from the laboratory method to the five step method to science as inquiry to no method at all How We Teach Science reveals that each strategy was influenced by the intellectual cultural and political circumstances of the time In some eras learning about experimentation and scientific inquiry was seen to contribute to an individual's intellectual and moral improvement while in others it was viewed as a way to minimize public interference in institutional science John Rudolph shows that how we think about and teach science will either sustain or thwart future innovation and ultimately determine how science is perceived and received by the public
