On the Differential Structure of Metric Measure Spaces and Applications Nicola Gigli,2015-06-26 The main goals of this paper are i To develop an abstract differential calculus on metric measure spaces by investigating the duality relations between differentials and gradients of Sobolev functions This will be achieved without calling into play any sort of analysis in charts our assumptions being the metric space is complete and separable and the measure is Radon and non negative ii To employ these notions of calculus to provide via integration by parts a general definition of distributional Laplacian thus giving a meaning to an expression like where is a function and is a measure iii To show that on spaces with Ricci curvature bounded from below and dimension bounded from above the Laplacian of the distance function is always a measure and that this measure has the standard sharp comparison properties This result requires an additional assumption on the space which reduces to strict convexity of the norm in the case of smooth Finsler structures and is always satisfied on spaces with linear Laplacian a situation which is analyzed in detail

Degree Spectra of Relations on a Cone Matthew Harrison-Trainor,2018-05-29 Let $\mathcal{A}$ be a mathematical structure with an additional relation R The author is interested in the degree spectrum of R either among computable copies of $\mathcal{A}$ when $\mathcal{A} \models R$ is a natural structure or to make this rigorous among copies of $\mathcal{A}$ R computable in a large degree d He introduces the partial order of degree spectra on a cone and begin the study of these objects Using a result of Harizanov that assuming an effectiveness condition on $\mathcal{A}$ and R if R is not intrinsically computable then its degree spectrum contains all $c \leq e$ degrees the author shows that there is a minimal non trivial degree spectrum on a cone consisting of the $c \leq e$ degrees
