2014 Physics Paper 1 September:

Embracing Complexity Jean G. Boulton, Peter Murray Allen, Cliff Bowman, 2015 The book describes what it means to say the world is complex and explores what that means for managers policy makers and individuals The first part of the book is about the theory and ideas of complexity This is explained in a way that is thorough but not mathematical It compares differing approaches and also provides a historical perspective showing how such thinking has been around since the beginning of civilisation It emphasises the difference between a complexity worldview and the dominant mechanical worldview that underpins much of current management practice It defines the complexity worldview as recognising the world is interconnected shaped by history and the particularities of context The comparison of the differing approaches to modelling complexity is unique in its depth and accessibility The second part of the book uses this lens of complexity to explore issues in the fields of management strategy economics and international development It also explores how to facilitate others to recognise the implications of adopting a complex rather than a mechanical worldview and suggests methods of research to explore systemic path dependent emergent aspects of situations The authors of this book span both science and management academia and practice thus the explanations of science are authoritative and yet the examples of changing how you live and work in the world are real and accessible The aim of the book is to bring alive what complexity is all about and to illustrate the importance of loosening the grip of a modernist worldview with its hope for prediction certainty and control

Cities in Transition Thomas Sauer, Susanne Elsen, Cristina Garzillo, 2016-02-26 Cities in Transition focuses on the sustainability transitions initiated in 40 European cities The book presents the incredible wealth of insights gathered through hundreds of interviews and questionnaires Four key domains local energy systems local green spaces local water systems and local labour markets have been the focus of the field research investigating local potentials for social innovation and new forms of civil society self organisation Examining the potential of new organizational frameworks like co operatives multi stakeholder constructions local regional partnerships and networks for the success of such transitions this book presents the key ingredients of a sustainable urban community as a viable concept to address current global financial environmental and social challenges Crucial reading for academics and practitioners of urban planning and sustainability in Europe Cities in Transition is an innovative roadmap for sustainability in changing cities
