Economics and Finance: Probability, Stochastic Processes, and Differential Equations Steven R. Dunbar, 2019-04-03 Mathematical Modeling in Economics and Finance is designed as a textbook for an upper division course on modeling in the economic sciences The emphasis throughout is on the modeling process including post modeling analysis and criticism It is a textbook on modeling that happens to focus on financial instruments for the management of economic risk The book combines a study of mathematical modeling with exposure to the tools of probability theory difference and differential equations numerical simulation data analysis and mathematical analysis Students taking a course from Mathematical Modeling in Economics and Finance will come to understand some basic stochastic processes and the solutions to stochastic differential equations They will understand how to use those tools to model the management of financial risk They will gain a deep appreciation for the modeling process and learn methods of testing and evaluation driven by data The reader of this book will be successfully positioned for an entry level position in the financial services industry or for beginning graduate study in finance economics or actuarial science The exposition in Mathematical Modeling in Economics and Finance is crystal clear and very student friendly The many exercises are extremely well designed Steven Dunbar is Professor Emeritus of Mathematics at the University of Nebraska and he has won both university wide and MAA prizes for extraordinary teaching Dunbar served as Director of the MAA's American Mathematics Competitions from 2004 until 2015 His ability to communicate mathematics is on full display in this approachable innovative text Creativity and Giftedness Roza

Leikin, Bharath Sriraman, 2016-08-24 This volume provides readers with a broad view on the variety of issues related to the educational research and practices in the field of Creativity in Mathematics and Mathematical Giftedness The book explores a the relationship between creativity and giftedness b empirical work with high ability or gifted students in the classroom and its implications for teaching mathematics c interdisciplinary work which views creativity as a complex phenomena that

cannot be understood from within the borders of disciplines i.e. to present research and theorists from disciplines such as neuroscience and complexity theory and findings from psychology that pertain to the creatively gifted students. As a whole, this volume brings together perspectives from mathematics educators, psychologists, neuroscientists, and teachers to present a collection of empirical, theoretical, and philosophical works that address the complexity of mathematical creativity and giftedness, its origins, nature, nurture, and ways forward. In keeping with the spirit of the series, the anthology substantially builds on previous ZDM volumes on interdisciplinarity (2009), creativity and giftedness (2013), and *Affect in Mathematical Modeling* (2019). Scott A. Chamberlin, Bharath Sriraman, 2019-06-03. In the book, the relationship between affect and modeling is discussed because, as educational psychologists have suggested for decades, affect directly influences achievement. Moreover, given the importance of mathematical modeling and the applications to high-level mathematics, it provides the field of mathematics psychology with insight regarding affect in relation to mathematical modeling. By doing so, it helps determine the degree to which understanding of mathematics and understanding affect in mathematical modeling episodes may have a direct effect on cognition.
