Fuel system ,1992 **Aerodynamic Performance of a 0.27-scale Model of an AH-64 Helicopter with Baseline and Alternate Rotor Blade Sets** Henry L. Kelley,1990 Performance of a 0 27 scale rotor model designed for the AH 64 Apache helicopter alternate rotor was measured in hover and forward flight compared with an AH 64 baseline rotor model Thrust rotor tip Mach number advance ratio and ground proximity were varied In hover at a nominal

thrust coefficient of 0.0064 the alternate rotor used about 6.4% less power than the baseline rotor. The corresponding thrust increase at this representative hover power condition was approximately 4.5% which represents an equivalent full scale increase in lift capability of about 660 lb. Comparable results were noted in forward flight except for the high thrust high speed cases investigated. Advance ratio 0.30 where the baseline rotor was slightly superior. Reduced performance at the higher thrusts and speeds was probably caused by Reynolds number effects and blade elasticity differences.

Keywords: Rotor blades, rotary wings, blade tips, attack helicopters, helicopter rotor performance, model rotor testing, tapered rotor blades, ground effects, etc.
