Cancer Cytogenetics John Swansbury, 2008-02-05 A collection of key cytogenetic and FISH techniques used by modern clinical laboratories in the genetic analysis of human malignancies The book's practical advice and methods are suitable for use at every level of expertise including fully established laboratories but with a sympathetic bias towards anyone considering setting up a new cytogenetics service Here the reader will find not only elementary tutorials on the fundamentals of human karyotypes and chromosome analysis but also detailed discussions on how laboratories may optimally upgrade their repertoire of capabilities to include such newer complementary techniques as CGH FISH and M FISH

Your Easy Way to Chromosomes Sana Nimer Abu Shihab, 2012-03 These days hardly a week goes by in the media without mention of a remarkable advancement in the field of genetics Cytogenetics is a branch of genetics that is concerned with the study of the structure and function of the chromosomes and their role in heredity Every individual inherits a pair of chromosomes from each of his parents Each cell in our body has 46 chromosomes each Chromosomes carry genetic information in the form of genes The genes within the chromosomes have a powerful impact on our health either directly through chromosomal or single gene disorders or by influencing our susceptibility to disease Cytogenetic study is performed in order to diagnose certain genetic disorders such as congenital birth defects mental retardation growth and developmental delay defects of sexual development ambiguous genitalia congenital defects abnormal facial features infertility multiple miscarriages amenorrhea autism malignancies and hematological disorders early embryonic death and gene mutations among others These can be identified by chromosomal analysis and molecular cytogenetic techniques such as Fluorescent in Situ Hybridization FISH and Microarray which have enormously expanded in recent years

Tumor Suppressor Genes Wafik S. El-Deiry, 2008-02-03 It has become clear that tumors arise from excessive cell proliferation and a corresponding reduction in cell death Tumors result from the successive accumulation of mutations in key regulatory target genes over time During the 1980s a number of oncogenes were characterized whereas from the 1990s to the present the emphasis shifted to tumor suppressor genes TSGs It has become clear that oncogenes and tumor suppressor genes function in the same pathways providing positive and negative growth regulatory activities The signaling pathways controlled by these genes involve virtually every process in cell biology including nuclear events cell cycle cell death cytoskeletal cell membrane angiogenesis and cell adhesion effects Tumor suppressor genes are mutated in hereditary cancer syndromes as well as somatically in nonhereditary cancers In their normal state TSGs control cancer development and progression as well as contribute to the sensitivity of cancers to a variety of therapeutics Understanding the classes of TSGs the biochemical pathways they function in and how they are regulated provides an essential lesson in cancer biology We cannot hope to advance our current knowledge and to develop new and more effective therapies without understanding the relevant pathways and how they influence the present approaches to therapy Moreover it is important to be able to access the powerful tools now available to

Murat Elçin, 2012-12-06 Recent years have seen an upsurge of significant interest in cell based technologies A range of productive and lively debate have taken place relating to tissue engineering namely the construction of tissues and whole organs using molecularly designed resorbable biomaterials to create tissue de novo the potential use of human embryonic stem cells for transplantation and regenerative medicine with similar potential for adult derived stem cells and gene therapy in relation to cell transplantation New findings in biomimetic

materials cell signalling pathways extracellular matrix receptors and ligands growth factors and the human genome project all present particularly motivating sources for the development of research in the evergrowing biomedical field The purpose of this book is to stimulate further the work in biomedicine and to make the issues of related scientific disciplines accessible to a wider readership by characterising the current state of research in the biomedical field The lectures and a selection of the presentations from BIOMED 200th The 9 International Symposium on Biomedical Science and Technology held in September 2002 in Turkey constitute the basis for the volume Tissue engineering stem cells cell and gene therapies were the major topics presented and discussed in the symposium This book is intended to serve as an up to date synopsis of the major developments of our area through the work reflected in BIOMED 2002 though not covering all aspects of the topics due to the natural restrictions within a volume of this kind

Hematologic Malignancies Guy B. Faguet, 2008-02-02

The aim of Hematologic Malignancies Methods and Techniques is to review those methods most useful for the diagnosis and subsequent management of hematologic malignancies The scope of coverage is intentionally broad ranging from routine procedures to highly sophisticated methods not currently offered by most clinical laboratories The latter methods were selected especially to bring into focus recent advances in molecular biology that since they provide us with strong tools for assessing the outcome of upcoming therapeutic modalities intent on disease eradication are expected to impact the future diagnosis and management of these diseases Thus the common thread among all chapters is clinical relevance whether sanctioned by past experience or by the expectation that seemingly esoteric research techniques of today will prove clinically valuable in the future Hematologic Malignancies Methods and Techniques is primarily a compilation of methods presented in sufficient detail by authors with extensive expertise in their field to serve not only as a reference for seasoned research and clinical laboratory personnel but also as a guide for the less experienced Moreover the contributing authors also discuss the pathophysiologic bases and the diagnostic usefulness that underscore each method's clinical relevance Thus this volume should be also valuable to clinicians especially hematologists oncologists and pathologists often

bewildered by an ever increasing flow of new scientific information the practical application of which is often either not clearly disclosed or difficult to discern
