

Gage R&R Analysis – Guidelines

GRR	Decision	Comments
Under 10%	Generally considered to be an acceptable measurement system.	Recommended, especially useful when trying to sort or classify parts or when tightened process control is required.
10% to 30%	May be acceptable for some applications.	Decision should be based upon, for example, importance of application measurement, cost of measurement device, and cost of rework or repair. Should be approved by the customer.
Over 30%	Considered to be unacceptable.	Every effort should be made to improve the measurement system. This condition may be addressed by the use of an appropriate measurement strategy, for example, using the average result of several readings of the same part characteristic in order to reduce final measurement variation.
