Ecstatic Worlds Janine Marchessault, 2023-10-31 When media translate the world to the world twentieth century utopian projects including Edward Steichen's Family of Man Jacques Cousteau's underwater films and Buckminster Fuller's geoscope Postwar artists and architects have used photography film and other media to imagine and record the world as a wonder of collaborative entanglement to translate the world for the world In this book Janine Marchessault examines a series of utopian media events that opened up and expanded the cosmos creating ecstatic collective experiences for spectators and participants

Marchessault shows that Edward Steichen's 1955 Family of Man photography exhibition for example and Jacques Cousteau's 1956 underwater film *Le monde du silence* *The Silent World* both gave viewers a sense of the earth as a shared ecology. The Festival of Britain 1951 in particular its Telekinema a combination of 3D film and television and its Live Architecture exhibition along with Expo 67's cinema experiments and media city created an awareness of multiple worlds. Toronto's alternative microcinema CineCycle Agnès Varda's 2000 film *Les glaneurs et la glaneuse* and Buckminster Fuller's World Game geoscope representing ecologies of images and resources encouraged planetary thinking. The transspecies communication platform the Dolphin Embassy devised by the Ant Farm architecture collaborative extends this planetary perspective toward other species and Finnish artist Erkki Kurenniemi's *Death of the Planet* projects a postanthropocentric future. Drawing on sources that range from the Scottish town planner Patrick Geddes to the French phenomenologist Maurice Merleau-Ponty Marchessault argues that each of these media experiments represents an engagement with connectivity and collectivity through media that will help us imagine a new form of global humanism.

Official Gazette of the United States Patent Office United States. Patent Office, 1894 **Official Gazette of the United States Patent Office** USA Patent Office, 1894 *Architecture Beyond the Cupola* Alberto Pugnale, Alberto Bologna, 2023-05-24 This book reviews Dante Bini's inventions and designs focusing on his form resistant Binishell and other pneumatic construction systems. Dante Bini's double profile of architect and builder underpins the narrative of the entire book. It is used to analyse the evolution of the early reinforced concrete Binishell patent into a variety of automated construction systems based on the use of air. Dante Bini has always been quite proactive in promoting his work and disseminating the results of his experimentations and achievements via journal articles, conference presentations and public talks, promotional brochures in multiple languages were also prepared to export and license his patents in various countries from Italy to the Americas and Australia. Despite this a rigorous study of Dante Bini's work is still unavailable and the relevance of this figure to contemporary architecture has yet to be discussed comprehensively. This book fills in this gap and arrives at the right time during the last two decades there has been an exponential interest in shell and spatial structures particularly concerning the use of complex geometries and innovative construction techniques. This book will be of interest to academics in architectural design theory and construction history and practitioners and students interested in expanding their knowledge in the design and construction of shell and spatial structures.
