Fault Tolerant Flight Control Christopher Edwards, Thomas Lombaerts, Hafid Smaili, 2010-04-18 Written by leading experts in the field this book provides the state of the art in terms of fault tolerant control applicable to civil aircraft The book consists of five parts and includes online material

Aircraft/Air Traffic Management Functional Analysis Model: Technical Description Melvin Etheridge, 1998

Model Driven Architecture with Executable UML Chris Raistrick, 2004-03-18 This book offers insight into a revolution in software development that will ultimately lead to automatic executable code generation directly from model specifications Using the most widely adopted software modelling language UML it demonstrates the way to build robust specifications based on OMG's Model Driven Architecture MDA Chapters then describe the steps needed to move directly to executable code using Executable UML XUML The volume will be a useful reference for professionals concerned with the future of software development for medium and large scale projects

Time-Varying Image Processing and Moving Object Recognition, 4 V. Cappellini, 1997-07-25 New digital image processing and recognition methods implementation techniques and advanced applications television remote sensing biomedicine traffic inspection robotics etc are presented in this volume Novel approaches i.e digital filters source coding neural networks etc for solving 2 D and 3 D problems are described Many papers focus on the motion estimation and tracking recognition of moving objects The increasingly important field of Cultural Heritage is also covered Some papers are more theoretical or of review nature while others contain new implementations and applications Generally the book presents for the above outlined area the state of the art theory implementation applications with future trends This book will be of interest not only to researchers professors and students in university departments of engineering communications computers and automatic control but also to engineers and managers of industries concerned with computer vision manufacturing automation robotics and quality control

Intelligent Agents III. Agent Theories, Architectures, and Languages Michael J. Wooldridge, Nick Jennings, 1997-01-22 Intelligent agents are computer systems that are capable of flexible autonomous action in dynamic typically multi agent domains Over the past few years the computer science community has begun to recognise that the technology of intelligent agents provides the key to solving a range of complex software application problems for which traditional software engineering tools and techniques offer no solution This book the third in a series represents the state of the art in the science of agent systems It is based on papers presented at the 3rd workshop on Agent Theories Architectures and Languages ATAL 96 held in conjunction with the European Conference on Artificial Intelligence ECAI 96 in Budapest Hungary in August 1996 It is essential reading for anyone interested in this vital new technology
