[Phishing for Phools](#) George A. Akerlof, Robert J. Shiller, 2016-08-16 Why the free market system encourages so much trickery even as it creates so much good Ever since Adam Smith the central teaching of economics has been that free markets provide us with material well being as if by an invisible hand In *Phishing for Phools* Nobel Prize winning economists George Akerlof and Robert Shiller

deliver a fundamental challenge to this insight arguing that markets harm as well as help us As long as there is profit to be made sellers will systematically exploit our psychological weaknesses and our ignorance through manipulation and deception Rather than being essentially benign and always creating the greater good markets are inherently filled with tricks and traps and will phish us as phools Phishing for Phools therefore strikes a radically new direction in economics based on the intuitive idea that markets both give and take away Akerlof and Shiller bring this idea to life through dozens of stories that show how phishing affects everyone in almost every walk of life We spend our money up to the limit and then worry about how to pay the next month's bills The financial system soars then crashes We are attracted more than we know by advertising Our political system is distorted by money We pay too much for gym memberships cars houses and credit cards Drug companies ingeniously market pharmaceuticals that do us little good and sometimes are downright dangerous Phishing for Phools explores the central role of manipulation and deception in fascinating detail in each of these areas and many more It thereby explains a paradox why at a time when we are better off than ever before in history all too many of us are leading lives of quiet desperation At the same time the book tells stories of individuals who have stood against economic trickery and how it can be reduced through greater knowledge reform and regulation

Storage and Scarcity Giorgio Osti, 2016-06-10 In an era of abundance at least part of humanity has stopped thinking about the future provision of basic vital resources such water energy and food Storage actions with all their variants whether real or imagined are sources of innovation in the provision and treatment of crucial resources This book deals with cases of water food energy and biodiversity storage as a response to a new era of scarcity Examining multilevel storage policies consumers practices and local organisations author Giorgio Osti explores a variety of examples such as the need to stock agriculture produce the industry and practices of food conservation the role of artificial water basins in controlling floods and droughts and the development of batteries able to compensate for the intermittence of renewable energy sources Storage and self sufficiency can be achieved in many technical ways at different territorial levels and according to different policies or philosophies Being more a grasshopper or an ant the two extreme positions depends not only on the technologies available but also on different analyses of the environment and different attitudes to the future This book offers an environmentalist perspective that uncovers hidden or absent activities of ultramodern societies that will be useful to students of environmental sociology as well as those researching and studying at the interface of environmental studies and geography
