

- Lesson Information Pack -

Shadows

Shadows are made when an object blocks light. The object must be opaque or translucent to make a shadow.

Long Shadows

The sun casts the longest shadows at the beginning and end of the day, when the sun is at a low point in the sky.

Short Shadow

The sun casts the shortest shadows at midday, when the sun is at a high point in the sky.

Sizes

If an object is moved closer to the light source, the shadow gets bigger. If an object is moved further away from the light source, the shadow gets smaller.

Opaque

Opaque materials do not let any light pass through them. They block the light and make dark shadows. Materials such as wood, paper and metal are opaque.

Translucent

Translucent materials let some light pass through them. They scatter the light and make faint shadows. Materials such as frosted glass and thin paper are translucent.

Transparent

Transparent materials let light pass through them in straight lines, so that you can see clearly through them. A transparent object lets light pass so it does not make a shadow.
