The Role of Carbon Capture and Storage (CCS) Technologies in a Net-Zero Carbon Future Mai Bui, Graeme Douglas Puxty, Matteo Gazzani, Salman Masoudi Soltani, Carlos Pozo, 2021-11-02 *Open Problems in Network Security* Jan Camenisch, Doğan Kesdoğan, 2016-04-30 This book constitutes the thoroughly refereed post conference proceedings of the IFIP WG 11.4 International Workshop on Open Problems in Network Security iNetSec 2015 held in Zurich Switzerland in October 2015. iNetSec is the main workshop of the IFIP working group WG 11.4; its objective is to present and discuss open problems and new research directions on all aspects related to network security. The 9 revised full papers presented in this volume were carefully reviewed and selected from 13 submissions. They were organized in topical sections named network security, intrusion detection, anonymous communication, and cryptography.

Principles of Performance and Reliability Modeling and Evaluation Lance Fiondella, Antonio Puliafito, 2016-04-06 This book presents the latest key research into the performance and reliability aspects of dependable fault tolerant systems and features commentary on the fields studied by Prof. Kishor S. Trivedi during his distinguished career. Analyzing system evaluation as a fundamental tenet in the design of modern systems, this book uses performance and dependability as common measures and covers novel ideas, methods, algorithms, techniques, and tools for the in-depth study of the performance and reliability aspects of dependable fault tolerant systems. It identifies the current challenges that designers and practitioners must face in order to ensure the reliability, availability, and performance of systems with special focus on their dynamic behaviors and dependencies and provides system researchers, performance analysts, and practitioners with the tools to address these challenges in their work. With contributions from Prof. Trivedi's former PhD students and collaborators, many of whom are internationally recognized experts, to honor him on the occasion of his 70th birthday, this book serves as a valuable resource for all engineering disciplines including electrical, computer, civil, mechanical, and industrial engineering, as well as production and manufacturing.

Handbook of Clean Energy Systems, 6 Volume Set Jinyue Yan, 2015-06-22 The Handbook of Clean Energy Systems brings together an international team of experts to present a comprehensive overview of the latest research developments and practical applications throughout all areas of clean energy systems. Consolidating information which is currently scattered across a wide variety of literature sources, the handbook covers a broad range of topics in this interdisciplinary research field, including both fossil and renewable energy systems. The development of intelligent energy systems for efficient energy processes and mitigation technologies for the reduction of environmental pollutants is explored in depth, and environmental, social, and economic impacts are also addressed. Topics covered include Volume 1: Renewable Energy, Biomass resources, and biofuel production.

Clean Energy Transition and Load Capacity Factors: Environmental Sustainability Assessment through Advanced Statistical Methods, 2nd edition Zeeshan Fareed,Farrukh Shahzad ,Solomon Prince Nathaniel,2025-09-11 Both developed and developing countries are concerned about sustainable development and reducing environmental burdens Environmental degradation is the deterioration of environmental quality caused by pollutants in the air as well as other activities and processes such as poor land use and natural disasters Although carbon dioxide emissions and ecological footprint are commonly used by academics to quantify environmental degradation assessing environmental sustainability requires a more complex and comprehensive ecological indicator In this context the load capacity factor allows for a comprehensive assessment of environmental sustainability by considering biocapacity and ecological footprint simultaneously The ratio of per capita biocapacity to per capita ecological footprint is called the load capacity factor This environmental quality indicator allows for environmental assessment from both a supply and demand perspective In this context discussion of the determinants of the load capacity factor is an important Research Topic One way to combat environmental degradation is through the clean energy transition The transition to clean energy can determine the environmental quality and thus load

capacity The transition to clean energy is a strategy to combat environmental damage Previous empirical research used traditional environmental metrics carbon emissions and ecological footprint and outdated statistical methods to examine the influence of the energy transition on environmental degradation Their results are contradictory and inconclusive Therefore to uncover a true link between the transition to renewable energy and environmental degradation the current Research Topic requires unique statistical methods In this Research Topic we welcome new discussions that explore the relationship between load capacity factor clean energy transition and other macroeconomic indicators using recent time series and panel data analyses For this Research Topic we are looking for Original Research Review new techniques and methodologies We look forward to receiving unique and creative contributions that focus on but are not limited to the following topics Total renewable energy and load capacity factor Sustainable development goals through load capacity factor Energy transition and load capacity factor Energy poverty and load capacity factor Wind energy and load capacity factor Hydro energy and load capacity factor Geothermal energy and load capacity factor Solar energy and load capacity factor Novel empirical methods time series panel data to measure the energy load capacity factor relationship

Interdisciplinary Research on Climate and Energy Decision Making M. Granger Morgan, 2022-12-16 This book explores the role and importance of interdisciplinary research in addressing key issues in climate and energy decision making For over 30 years an interdisciplinary team of faculty and students anchored at Carnegie Mellon University joined by investigators and students from a number of other collaborating institutions across North America Europe and Australia have worked together to better understand the global changes that are being caused by both human activities and natural causes This book tells the story of their successful interdisciplinary work With each chapter written in the first person the authors have three key objectives 1 to document and provide an accessible account of how they have framed and addressed a range of the key problems that are posed by the human dimensions of global change 2 to illustrate how investigators and graduate students have worked together productively across different disciplines and locations on common problems and 3 to encourage funders and scholars across the world to undertake similar large scale interdisciplinary research activities to meet the world's largest challenges Exploring topics such as energy efficiency public health and climate adaptation and with a final chapter dedicated to lessons learned this innovative volume will be of great interest to students and scholars of climate change energy transitions and environmental studies more broadly

Energy Master Planning toward Net Zero Energy Resilient Public Communities Guide Alexander Zhivov, 2022-06-13 Best practices from around the world have proven that holistic Energy Master Planning can be the key to identifying cost effective solutions for energy systems that depend on climate zone density of energy users and local resources Energy Master Planning can be applied to various scales of communities e.g. to a group of buildings a campus a city a region or even an entire nation Although the integration of the energy master planning into the community master planning process may be a challenging task it also provides significant opportunities to support energy efficiency and

community resilience by increasing budgets for investments derived from energy savings by providing more resilient and cost effective systems by increasing comfort and quality of life and by stimulating local production which boosts local economies The Guide is designed to provide a valuable information resource for those involved in community planning energy systems engineers architects energy managers and building operators Specifically this Guide was developed to support the application of the Energy Master Planning process through the lens of best practices and lessons learned from case studies from around the globe The Guide introduces concepts and metrics for energy system resilience methodologies and discusses business and financial models for Energy Master Plans implementation This information can help planners to establish objectives and constraints for energy planning and to select and apply available technologies and energy system architectures applicable to their diverse local energy supply and demand situations This Guide is a result of research conducted under the International Energy Agency IEA Energy in Buildings and Communities EBC Program Annex 73 and the US Department of Defense Environmental Security Technology Certification Program ESTCP project EW18 5281 to support the planning of Low Energy Resilient Public Communities process that is easy to understand and execute [Advances in Robotics and Automatic Control: Reviews, Vol. 1](#) Sergey Yurish,2018-07-22 The first volume of the Advances in Robotics and Automatic Control Reviews Book Series started by IFSA Publishing in 2018 contains ten chapters written by 32 contributors from 9 countries Belgium China Germany India Ireland Japan Serbia Tunisia and USA We hope that readers will enjoy this book and it can be a valuable tool for those who involved in research and development of various robots and automatic control systems
