

## Chapter 20 Electricity

**Section 20.1 Electric Charge and Static Electricity**

(pages 600–603)

*This section explains how electric charge is created and how positive and negative charges affect each other. It also discusses the different ways that electric charge can be transferred.*

**Reading Strategy (page 600)**

**Identifying Main Ideas** Copy the table on a separate sheet of paper. As you read, write the main ideas. For more information on this Reading Strategy, see the **Reading and Study Skills** in the **Skills and Reference Handbook** at the end of your textbook.

| Characteristics of Electric Charge |                                                                                 |
|------------------------------------|---------------------------------------------------------------------------------|
| Topic                              | Main Idea                                                                       |
| Electric Charge                    | An excess or shortage of electrons produces a net electric charge.              |
| Electric Forces                    | Like charges repel and opposite charges attract.                                |
| Electric Fields                    | The strength of a field depends on the net charge and distance from the charge. |
| Static Electricity                 | Charge can be transferred by friction, contact, and induction.                  |
