Question 1

1 point

Many do you think the profit margin for Anagene's cartridges has been fluctuating? Is likely attributable to the actual number of units of this cartridge changing, or because of the pricing system they are using to calculate the cost?

The actual number of units of the cartridges that are sold changes. The company tracks the estimated number of cartridges produced and records the quantity of the units per unit. This led to the estimated number of units change. Finally, company records the quantity of the cartridges that are sold for the actual production per unit.
