The respiratory system is made up of

- Trachea
- Bronchi (Trachea)
- Lung (Lung)
- Alveoli (Alveoli)
- Capillaries (Capillaries)
- Diaphragm (Diaphragm)
- Intercostal muscles (Intercostal muscles)

Right and Left Lungs

Our respiratory system is the main part which air enters the body. The right (anterior) side, the left (posterior) side.

The main cavity is made up of two parts - the right and left lung cavities.

Right lung - the right lung is larger and contains the right main bronchus.

Left lung - the left lung is smaller and contains the left main bronchus.

Diaphragm - the diaphragm is a muscular partition between the chest and abdominal cavities.

Intercostal muscles - the intercostal muscles are located between the ribs and help to expand the chest cavity.

Trachea - the trachea is the windpipe and carries air into the lungs.

Bronchi - the bronchi are the main airways that branch out from the trachea into the lungs.

Alveoli - the alveoli are small air sacs where gas exchange takes place.

Capillaries - the capillaries are small blood vessels that surround the alveoli.

Diaphragm - the diaphragm is a muscular partition between the chest and abdominal cavities.

Intercostal muscles - the intercostal muscles are located between the ribs and help to expand the chest cavity.

Trachea - the trachea is the windpipe and carries air into the lungs.

Bronchi - the bronchi are the main airways that branch out from the trachea into the lungs.

The Bronchi

The bronchi are the main airways that carry air into the lungs. They are located in the center of the chest and branch out into the lungs.

The right bronchus is larger and carries air into the right lung. The left bronchus is smaller and carries air into the left lung.

The bronchi are made of cartilage to keep them open. They are also lined with cilia to help move mucus out of the lungs.

The bronchi branch out into smaller airways called bronchioles. These lead to the alveoli, where gas exchange takes place.

The alveoli are small air sacs that look like clusters of grapes. They are where oxygen enters the blood and carbon dioxide leaves.

The diaphragm is a muscular partition between the chest and abdominal cavities. It contracts and relaxes to help with breathing.

The intercostal muscles are located between the ribs. They contract and relax to help expand the chest cavity.

The trachea is the windpipe and carries air into the lungs. It is made of cartilage and is lined with cilia.

The mechanism of respiration involves the contraction and relaxation of the diaphragm and the intercostal muscles. This creates a pressure difference that draws air into the lungs.

The diagram shows the lungs and the diaphragm. The diaphragm contracts and moves down, increasing the volume of the chest cavity. This causes the pressure to drop, and air is drawn in.

The diagram shows the lungs and the diaphragm. The diaphragm relaxes and moves up, decreasing the volume of the chest cavity. This causes the pressure to rise, and air is pushed out.
