

The Digestive System

What is the digestive system?

The digestive system, or **gastrointestinal tract**, is a tract of organs that is used to break down food into nutrients that can be absorbed by the body. The digestive system is a complex system that includes the mouth, salivary glands, stomach, liver, pancreas, gallbladder, small intestine, large intestine, rectum, and anus.

Liver, pancreas & gallbladder

The liver, pancreas, and gallbladder are located in the upper right quadrant of the abdomen. The liver is the largest organ in the body and is responsible for producing bile, which is stored in the gallbladder. The pancreas is a small organ that is located behind the stomach and is responsible for producing pancreatic juice, which is used to digest food.

The large intestine is the final part of the digestive system. It is responsible for absorbing water and electrolytes from the remaining indigestible food matter. The large intestine is divided into the cecum, ascending colon, transverse colon, descending colon, and sigmoid colon.

Peristaltic action is the process by which the digestive tract moves food and liquid through the system. It is a series of involuntary contractions and relaxations of the muscles in the digestive tract that push the food forward.

The mouth & salivary glands

The mouth and salivary glands are the first part of the digestive system. The mouth is responsible for breaking down food into smaller pieces that can be swallowed. The salivary glands produce saliva, which is used to moisten food and begin the process of digestion.

The stomach

The stomach is a large, muscular organ that is responsible for breaking down food into smaller pieces that can be absorbed by the body. It is located in the upper left quadrant of the abdomen.

Small intestine

The small intestine is a long, coiled organ that is responsible for absorbing nutrients from the food that is eaten. It is located in the lower right quadrant of the abdomen.

Absorption

Absorption is the process by which nutrients from the food that is eaten are taken up by the body. It occurs in the small intestine and the large intestine.
