

Solve the System Algebraically

Use Substitution

$$x^2 + y^2 = 25$$

$$4y = 3x$$

$$y = \frac{3}{4}x$$

$$x^2 + \left(\frac{3}{4}x\right)^2 = 25$$

$$x^2 + \frac{9}{16}x^2 = 25$$

$$16x^2 + 9x^2 = 400$$

$$25x^2 = 400$$

$$x^2 = 16$$

$$x = \pm 4$$

$$\boxed{x = 4}$$

$$4y = 3(4)$$

$$4y = 12$$

$$y = 3$$

(4, 3)

$$\boxed{x = -4}$$

$$4y = 3(-4)$$

$$4y = -12$$

$$y = -3$$

(-4, -3)

Answer: **(4, 3) (-4, -3)**

Solving Linear System Algebraically:

Computer Algorithms for Solving Linear Algebraic Equations Emilio Spedicato, 2012-12-06 The NATO Advanced Study Institute on Computer algorithms for solving linear algebraic equations the state of the art was held September 9-21 1990 at II Ciocco Barga Italy It was attended by 68 students among them many well known specialists in related fields from the following countries Belgium Brazil Canada Czechoslovakia Denmark France Germany Greece Holland Hungary Italy Portugal Spain Turkey UK USA USSR Yugoslavia Solving linear equations is a fundamental task in most of computational mathematics Linear systems which are now encountered in practice may be of very large dimension and their solution can still be a challenge in terms of the requirements of accuracy or reasonable computational time With the advent of supercomputers with vector and parallel features algorithms which were previously formulated in a framework of sequential operations often need a completely new formulation and algorithms that were not recommended in a sequential framework may become the best choice The aim of the ASI was to present the state of the art in this field While not all important aspects could be covered for instance there is no presentation of methods using interval arithmetic or symbolic computation we believe that most important topics were considered many of them by leading specialists who have contributed substantially to the developments in these fields *Algebraically Approximate and Noisy Realization of Discrete-Time Systems and Digital Images* Yasumichi Hasegawa, 2009-09-30 This monograph deals with approximation and noise cancellation of dynamical systems which include linear and nonlinear input output relationships It also deal with approximation and noise cancellation of two dimensional arrays It will be of special interest to researchers engineers and graduate students who have specialized in filtering theory and system theory and digital images This monograph is composed of two parts Part I and Part II will deal with approximation and noise cancellation of dynamical systems or digital images respectively From noiseless or noisy data reduction will be made A method which reduces model information or noise was proposed in the reference vol 376 in LNCIS Hasegawa 2008 Using this method will allow model description to be treated as noise reduction or model reduction without having to bother for example with solving many partial differential equations This monograph will propose a new and easy method which produces the same results as the method treated in the reference As proof of its advantageous effect this monograph provides a new law in the sense of numerical experiments The new and easy method is executed using the algebraic calculations without solving partial differential equations For our purpose many actual examples of model information and noise reduction will also be provided Using the analysis of state space approach the model reduction problem may have become a major theme of technology after 1966 for emphasizing efficiency in the fields of control economy numerical analysis and others Barron's Math 360: A Complete Study Guide to Pre-Calculus with Online Practice Barron's Educational Series, Lawrence S. Gordon, Florence S. Gordon, 2025-02-24 This is a college algebra level textbook written to provide the kind of mathematical knowledge and experiences that students will need for courses in other fields such as biology chemistry business finance economics and other areas that are heavily dependent on data either from laboratory experiments or from other studies The focus is on the fundamental mathematical concepts and the realistic problem solving via mathematical modeling rather than the development of algebraic skills that might be needed in calculus Functions Data and Models presents college algebra in a way that differs from almost all college algebra books available today Rather than going over material covered in high school courses the Gordons teach something new Students are given an introduction to data analysis and mathematical modeling presented at a level that students with limited algebraic skills can understand The book contains a rich set of exercises many of which use real data Also included are thought experiments or what if questions that are meant to stretch the student s mathematical thinking **Algebra II Workbook For Dummies** Mary Jane Sterling, 2014-05-20 To succeed in Algebra II start practicing now Algebra II builds on your Algebra I skills to prepare you for trigonometry calculus and a of myriad STEM topics Working through practice problems helps students better ingest and retain lesson content creating a solid foundation to build on for future success Algebra II Workbook For Dummies 2nd Edition helps you learn Algebra II by doing Algebra II Author and math professor Mary Jane Sterling walks you through the entire course showing you how to approach and solve the problems you encounter in class You ll begin by refreshing your Algebra I skills because you ll need a strong foundation to build upon From there you ll work through practice problems to clarify concepts and improve understanding and retention Revisit quadratic equations inequalities radicals and basic graphs Master quadratic exponential and logarithmic functions Tackle conic sections as well as linear and nonlinear systems Grasp the
