CELLS AND TISSUES

Cells are the basic units of structure and function of the body

Characteristics of living organisms

Living organisms are characterized by the following traits:

- 1. Organization - the ability to maintain a highly ordered internal structure
- 2. Metabolism - the ability to convert energy and matter into other forms
- 3. Growth - the ability to increase in size and complexity
- 4. Reproduction - the ability to produce offspring

The body is composed of four main types of tissues: epithelial, connective, muscle, and nervous tissue.

- Epithelial tissue - covers the body and lines internal organs
- Connective tissue - supports and connects other tissues
- Muscle tissue - contracts to produce movement
- Nervous tissue - transmits electrical signals

ORGANS

Organs are structures composed of two or more types of tissues

Each organ has a specific function in the body

Organs are composed of different types of tissues

Organs are organized into systems

Organ systems

Organ systems are groups of organs that work together to perform a specific function

Body systems

NERVOUS SYSTEM

The nervous system is responsible for controlling the body's internal environment

Functions

- 1. Sensory input - the process of receiving information from the environment
- 2. Integration - the process of processing the information
- 3. Motor output - the process of sending information to the muscles and glands

Structure

- 1. Brain - the central control center of the nervous system
- 2. Spinal cord - the pathway for information between the brain and the rest of the body
- 3. Nerves - the bundles of fibers that carry information between the brain and the rest of the body

Regulation

The nervous system is regulated by the brain and the hormones

ENDOCRINE SYSTEM

The endocrine system is responsible for regulating the body's internal environment

It consists of glands that secrete hormones into the bloodstream

Hormones travel through the bloodstream to target organs

Target organs respond to the hormones by changing their function
