Encountering Evolution Johanna Frejd,2019-08-21 This thesis explores preschool class children s meaning making processes when they encounter evolution By adopting social semiotic and sociocultural perspectives on meaning making three group based tasks were designed Video data from the activities were analysed using a multimodal approach The analysis focuses on how the communicated science content affects the science focus of the tasks how different materials function as semiotic resources and influence meaning making and interactive aspects of doing science in the meaning making processes The findings reveal that by using the provided materials and their previous experiences the children argue for different reasons for animal diversity and evolution Throughout the tasks a child centric view of life emerged in a salient manner This means that apart from the science focus the children also emphasise other aspects that they find important The child centric perspective is suggested to be a strength that enables children to engage in science activities The results show that the provided materials had three functions Children use materials as resources providing meaning This means that the children draw on the meaning potential of the materials a process that is influenced by their previous experiences Moreover in interaction with peers the materials also serve as communicative and argumentative tools Thus access to materials influences the children s meaning making and enables them to discuss evolution and do science The findings also reveal an

The Fire Ants Walter R. Tschinkel, 2013-03-11. Walter Tschinkel's passion for fire ants has been stoked by over thirty years of exploring the rhythm and drama of *Solenopsis invicta*'s biology. Since South American fire ants arrived in Mobile, Alabama, in the 1940s, they have spread to become one of the most reviled pests in the Sunbelt. In *Fire Ants*, Tschinkel provides not just an encyclopedic overview of *S. invicta*, how they found colonies, construct and defend their nests, forage and distribute food, struggle among themselves for primacy, and even relocate entire colonies, but a lively account of how research is done, how science establishes facts, and the pleasures and problems of a scientific career. Between chapters, detailed enough for experts but readily accessible to any educated reader, interludes provide vivid verbal images of the world of fire ants and the people who study them. Early chapters describe the several failed and heavily politically influenced eradication campaigns, and later ones the remarkable spread of *S. invicta*'s polygynous form in which nests harbor multiple queens and colonies reproduce by budding. The reader learns much about ants, the practice of science, and humans' role in the fire ant's North American success.
