Space - Time - Matter Jochen Brüning, Matthias Staudacher, 2018-04-09 This monograph describes some of the most interesting results obtained by the mathematicians and physicists collaborating in the CRC 647 Space Time Matter in the years 2005-2016. The work presented concerns the mathematical and physical foundations of string and quantum field theory as well as cosmology. Important topics are the spaces and metrics modelling the geometry of matter and the evolution of these geometries. The partial differential equations governing such structures and their singularities, special solutions and stability properties are discussed in detail.

Random Growth Models Michael Damron, Firas Rassoul-Agha, Timo Seppäläinen, 2018-09-27 The study of random growth models began in probability theory about 50 years ago and today this area occupies a central place in the subject. The considerable challenges posed by these models have spurred the development of innovative probability theory and opened up connections with several other parts of mathematics such as partial differential equations, integrable systems and combinatorics. These models also have applications to fields such as computer science, biology and physics. This volume is based on lectures delivered at the 2017 AMS Short Course Random Growth Models held January 2-3, 2017 in Atlanta, GA. The articles in this book give an introduction to the most studied models, namely first and last passage percolation, the Eden model of cell growth and particle systems focusing on the main research questions and leading up to the celebrated Kardar-Parisi-Zhang equation. Topics covered include asymptotic properties of infection times, limiting shape results, fluctuation bounds and geometrical properties of geodesics which are optimal paths for growth.

Hardy Type Inequalities on Time Scales Ravi P. Agarwal, Donal O'Regan, Samir H. Saker, 2016-10-20 The book is devoted to dynamic inequalities of Hardy type and extensions and generalizations via convexity on a time scale T . In particular, the book contains the time scale versions of classical Hardy type inequalities, Hardy and Littlewood type inequalities, Hardy-Knopp type inequalities via convexity, Copson type inequalities, Copson-Beesack type inequalities, Liendeler type inequalities, Levinson type inequalities and Pachpatte type inequalities, Bennett type inequalities, Chan type inequalities and Hardy type

inequalities with two different weight functions These dynamic inequalities contain the classical continuous and discrete inequalities as special cases when $T = R$ and $T = N$ and can be extended to different types of inequalities on different time scales such as $T = h\mathbb{N}$, $h > 0$, $T = q\mathbb{N}$ for $q > 1$ etc In this book the authors followed the history and development of these inequalities Each section is self contained and one can see the relationship between the time scale versions of the inequalities and the classical ones To the best of the authors knowledge this is the first book devoted to Hardy type inequalities and their extensions on time scales

Large Deviations and Asymptotic Methods in Finance Peter K. Friz, Jim Gatheral, Archil Gulisashvili, Antoine Jacquier, Josef Teichmann, 2015-06-16 Topics covered in this volume large deviations differential geometry asymptotic expansions central limit theorems give a full picture of the current advances in the application of asymptotic methods in mathematical finance and thereby provide rigorous solutions to important mathematical and financial issues such as implied volatility asymptotics local volatility extrapolation systemic risk and volatility estimation This volume

gathers together ground breaking results in this field by some of its leading experts Over the past decade asymptotic methods have played an increasingly important role in the study of the behaviour of financial models These methods provide a useful alternative to numerical methods in settings where the latter may lose accuracy in extremes such as small and large strikes and small maturities and lead to a clearer understanding of the behaviour of models and of the influence of parameters on this behaviour Graduate students researchers and practitioners will find this book very useful and the diversity of topics will appeal to people from mathematical finance probability theory and differential geometry
