of ordered silver nanoparticles and localized refractive index changes in poly 2 hydroxyethyl methacrylate and polyacrylamide films The sensors exhibited reversible Bragg peak shifts and diffracted the spectrum of narrow band light over the wavelength range peak 495 1100 nm Clinical trials of glucose sensors in the urine samples of diabetic patients demonstrated that they offer superior performance compared to commercial high throughput urinalysis devices Lastly a generic smartphone application to quantify colorimetric tests was developed and tested for both Android and iOS operating systems The sensing platform and smartphone application may have implications for the development of low cost reusable and equipment free point of care diagnostic devices
