Tales of Research Misconduct Hub Zwart, 2017-09-14 This monograph contributes to the scientific misconduct debate from an oblique perspective by analysing seven novels devoted to this issue namely *Arrowsmith* by Sinclair Lewis 1925 *The affair* by C P Snow 1960 *Cantor's Dilemma* by Carl Djerassi 1989 *Perlmann's Silence* by Pascal Mercier 1995 *Intuition* by Allegra Goodman 2006 *Solar* by Ian McEwan 2010 and *Derailment* by Diederik Stapel 2012 Scientific misconduct i.e. fabrication falsification plagiarism but also other questionable research practices have become a focus of concern for academic communities worldwide but also for managers funders and publishers of research The aforementioned novels offer intriguing windows into integrity challenges emerging in contemporary research practices They are analysed from a continental philosophical perspective providing a stage where various voices positions and modes of discourse are mutually exposed to one another so that they critically address and question one another They force us to start from the admission that we do not really know what misconduct is Subsequently by providing case histories of misconduct they address integrity challenges not only in terms of individual deviance but also in terms of systemic crisis due to current transformations in the

ways in which knowledge is produced Rather than functioning as moral vignettes the author argues that misconduct novels challenge us to reconsider some of the basic conceptual building blocks of integrity discourse Except where otherwise noted this book is licensed under a Creative Commons Attribution 4.0 International License To view a copy of this license visit <http://creativecommons.org/licenses/by/4.0/>

When Ideology Trumps Science Erika Allen Wolters, Brent S. Steel, 2017-12-01 This book reveals how embedded beliefs more so than a lack of scientific knowledge and understanding are creating a cognitive bias toward information that coincides with personal beliefs rather than scientific consensus and that this anti science bias exists among liberals as well as conservatives In 2010 an outbreak of whooping cough in California infected more than 8 000 people resulting in the hospitalization of more than 800 people and the death of 10 infants In 2015 an outbreak of the measles in Disneyland infected more than 125 people Both the whooping cough and the measles are vaccine preventable diseases VPDs that have been largely nonexistent in the United States for decades As these cases demonstrate individuals who prioritize ideology or personal beliefs above scientific consensus can impinge on society at large and they illustrate how rejecting science has unfortunate results for public health and for the environment When Ideology Trumps Science examines how proponents of scientific findings and the scientists responsible for conducting and communicating the applicable research to decision makers are encountering direct challenges to scientific consensus Using examples from high stakes policy debates centered on hot button controversies such as climate change GMO foods immunization stem cell research abstinence only education and birth control authors Wolters and Steel document how the contested nature of contemporary perspectives on science leads to the possibility that policymakers will not take science into account when making decisions that affect the general population In addition the book identifies ways in which liberals and conservatives have both contested issues of science when consensus diverges from their ideological positions and values It is a compelling must read for public policy students

and practitioners
