development Sustainable Management of Urban Water Resources Susanne Charlesworth, Craig Lashford, 2021-01-28 It is well known that 55% of the world's population currently lives in urban areas and this figure is predicted to grow to 68% by 2050 adding more than 2.5 billion people to urban populations. It is also projected that there will be 43 megacities worldwide by 2030 with populations of more than 10 million inhabitants. The United Nations World Water Development Report 2018 warned that by 2030 the global demand for fresh water is likely to exceed supply by 40%. Added to population growth, climate change has the potential to lead to changes in rainfall regimes with the potential of increased flooding and drought. Currently 1.2 billion people are at risk from flooding but this is predicted to increase to about 1.6 billion i.e. nearly 20% of the total world population by 2050. In line with this, replacing deteriorating water management infrastructure that can no longer cope is economically unfeasible, impracticable from a construction point of view and likely to fail in the long term. To address these issues, approaches are needed that are flexible and have multiple benefits. In its World Water Development Report 2018, the UN promotes the use of nature-based solutions to some of these problems with the focus of Sustainable Development Goal 6, making sure that everyone has access to a safe and affordable supply of potable water and sanitation by 2030, requiring investment in suitable infrastructure across the world. This Special Issue covers the challenges faced in managing urban water in all its forms, from potable supplies to reuse and harvesting, as well as resilient and sustainable approaches developed to address flooding and drought.

Beyond BIM Danelle Briscoe, 2015-10-14 Beyond BIM explores the vast and under-explored design potential undertaken by information modeling. Through a series of investigations grounded in the analysis of built work, interviews with leading practitioners and speculative projects, the author catalogs the practical advantages and theoretical implications of exploiting BIM as a primary tool for design innovation. Organized by information type such as geographic data, local code or materials, each chapter suggests a realm of knowledge that can be harvested and imported into BIM to give meaningful specificity to architectural form and space. While highly sustainable, the work documented and envisioned in this book moves well beyond normalization to reveal inventive takes on contemporary practice. Beyond BIM serves as a primary resource for professional architects, from practice researchers and designers engaged in information

related spatial design processes as well as students and faculties of architecture schools in search of BIM design inspiration Likewise those highly attuned to computation and unconventional ways of creating form and space particularly built outcomes that utilize BIM will find this book meaningful and essential

Phronesis Kristján Kristjánsson, Blaine Fowers, 2024-02-09 Phronesis or practical wisdom has interested philosophers and more recently psychologists for millennia In the last decade or so a bandwagon of diverse academics has been working with and celebrating the notion of phronesis as a metacognitive capacity guiding morally aspirational cognition and action In Phronesis Retrieving Practical Wisdom in Psychology Philosophy and Education Kristján Kristjánsson and Blaine J Fowers work through some of the relevant puzzles created by the recent phronesis discourse filling gaps in the current
