Food Additive Yehia El-Samragy,2012-02-22 A food additive is defined as a substance not normally consumed as a food in itself and not normally used as a characteristic ingredient of food whether or not it has nutritive value Food additives are natural or manufactured substances which are added to food to restore colors lost during processing They provide sweetness prevent deterioration during storage and guard against food poisoning preservatives This book provides a review of traditional and

non traditional food preservation approaches and ingredients used as food additives It also provides detailed knowledge for the evaluation of the agro industrial wastes based on their great potential for the production of industrially relevant food additives Furthermore the assessment of potential reproductive and developmental toxicity perspectives of some newly synthesized food additives on market has been covered Finally the identification of the areas relevant for future research has been pointed out indicating that there is more and more information needed to explore the possibility of the implementation of some other materials to be used as food additives

Using Mass Spectrometry for Biochemical Studies on Enzymatic Domains from Polyketide Synthases Matthew Jenner,2016-04-27 This thesis reports studies on the substrate specificity of crucial ketosynthase KS domains from trans AT Polyketide Synthases PKSs Using a combination of electrospray ionisation mass spectrometry ESI MS and simple N acetyl cysteamine SNAC substrate mimics the specificity of a range of KS domains from the bacillaene and psymberin PKSs have been successfully studied with regard to the initial acylation step of KS catalysis In addition the ability to alter the substrate tolerance of KS domains by simple point mutations in the active site has been demonstrated A series of acyl ACPs have been synthesised using a novel methodology and employed to probe the substrate specificity of both KS domains and the previously uncharacterised acyl hydrolase domain PedC KS catalysed chain elongation reactions have also been conducted and monitored by ESI MS MS All KS domains studied exhibited higher substrate specificity at the elongation step than in the preceding acylation step Furthermore a mechanism of reversible acylation is proposed using the PsyA ACP1 KS1 di domain The findings in this thesis provide important insights into mechanisms of KS specificity and show that mutagenesis can be used to expand the repertoire of acceptable substrates for future PKS engineering
