

Instructions for filming videos and provide stimuli for babies with low mobility

General Orientations

- 1 Avoid crowding of people and noises during filming.
- 2 The camera shot can be static or with movement. Record the video for 2-3 minutes in each position to visualize the baby's whole body. The video should allow the visualization of the baby's movements.
- 3 Film the baby's entire body, showing head, arms and legs.
- 4 The baby must be awake, alert, calm and fed.
- 5 Wear as little clothing as possible without socks.
- 6 Place your baby on a comfortable and stable surface (non-slip), such as a thin mattress or a tatami floor.
- 7 Set aside your baby's favorite toys to encourage the desired movement.
- 8 Do not restrict the baby's movements. The baby needs space to move around and rolls over his/her stomach.
- 9 Incite the movements slowly, waiting for the baby's time to act.
- 10 You should not facilitate your baby's movements or touch the baby. You can stimulate the baby by calling or using toys.

Film the baby from above

For one minute, do not stimulate the baby and let the baby move freely. If the baby rolls over his/her stomach, go to the chart below.

Place the toy over the mat and at the baby's side. When the baby turns to the side, place the toy above the head of the baby to stimulate rolling over his/her stomach.

Film the baby from the side

Position the baby on his/her stomach, with his/her arms close to the body, in case the baby does not roll spontaneously. Let the baby move freely over his/her stomach without stimulation.

Present the toy in front of the baby.

Present a toy over the baby's head so that he/she turns on his back.

Film the baby side and front.

With the baby lying on his/her back, hold his/her hands and pull slowly to a sitting position. In case the head falls back, stop the movement.

Sit the baby and hold in his/her trunk.

Slowly position the baby's hands, at his/her front, on the floor, so he is sitting alone.

If the baby sits without support, present a toy at his/her front and at both sides to stimulate reaching and trunk rotation.

Position the baby standing. Hold your baby at this position, placing your hands at the baby's armpits, or the baby's waist, or the baby's hands, according to the support required by the him/her.
