Monotonic and Ultra-Low-Cycle Fatigue Behaviour of Pipeline Steels António Augusto Fernandes, Abílio M.P. de Jesus, Renato Natal Jorge, 2018-06-15 This book covers the development of innovative computational methodologies for the simulation of steel material fracture under both monotonic and ultra low cycle fatigue The main aspects are summarised as follows i Database of small and full scale testing data covering the X52 X60 X65 X70 and X80 piping steel grades Monotonic and ULCF tests of pipe components were performed buckled and dented pipes elbows and straight pipes ii New constitutive models for both monotonic and ULCF loading are proposed Besides the Barcelona model alternative approaches are presented such as the combined Bai Wierzbicki Ohata Toyoda model iii Developed constitutive models are calibrated and validated using experimentally derived testing data Guidelines for damage simulation are included The book could be seen as a comprehensive repository of experimental results and numerical modeling on advanced methods dealing with Ultra Low Cycle Fatigue of Pipelines when subjected to high strain loading conditions Computational Biomechanics for Medicine Grand R. Joldes, Barry Doyle, Adam Wittek, Poul M.F. Nielsen, Karol Miller, 2016-06-15 The Computational Biomechanics for Medicine titles provide an opportunity for specialists in computational biomechanics to present their latest methodologies and advancements This volume comprises eighteen of the newest approaches and applications of computational biomechanics from researchers in Australia New Zealand USA UK Switzerland Scotland France and Russia Some of the interesting topics discussed are tailored computational models traumatic brain injury soft tissue mechanics medical image analysis and clinically relevant simulations One of the greatest challenges facing the computational engineering community is to extend the success of computational mechanics to fields outside traditional engineering in particular to biology the biomedical sciences and medicine We hope the research presented within this book series will contribute to overcoming this grand challenge *High Performance and Optimum Design of Structures and Materials* W. P. De Wilde, S. Hernández, C. A. Brebbia, 2014-06-09 The use of novel materials and new structural concepts nowadays is not restricted to highly technical areas like aerospace aeronautical applications or the automotive industry but affects all engineering fields including those such as civil engineering and architecture Addressing issues involving advanced types of structures particularly those based on new concepts or new materials and their system design contributions highlight the latest developments in design optimisation manufacturing and experimentation Also included are contributions on new software numerical methods and different optimisation techniques Optimisation problems of interest involve those related to size shape and topology of structures and materials Most high performance structures require the development of a generation of new materials which can more easily resist a range of external stimuli or react in a non conventional manner Particular emphasis is placed on intelligent structures and materials as well as the application of computational methods for their modelling control and management Optimisation techniques have much to offer to those involved in the design of new industrial products The

formulation of optimum design has evolved from the time it was purely an academic topic able now to satisfy the requirements of real life prototypes The development of new algorithms and the appearance of powerful commercial computer codes with easy to use graphical interfaces have created a fertile field for the incorporation of optimisation in the design process in all engineering disciplines This proceedings volume is the first from a new edition of the High Performance Design of Structures and Materials and the Optimum Design of Structures conferences which follows the success of a number of meetings that originated in 1989 Topics covered include Composite materials Material characterisation Experiments and numerical analysis Steel structures High performance concretes Natural fibre composites Transformable structures Lightweight structures Timber structures Environmentally friendly and sustainable structures Emerging structural applications Optimisation in civil engineering Evolutionary methods in optimisation Shape and topology optimisation Aerospace structures Structural optimisation Biomechanics application Material optimisation Life cost optimisation Intelligence structures and smart materials
