*Finite Element Analysis of Composite Materials* Ever J. Barbero, 2007-08-03 Designing structures using composite materials poses unique challenges due especially to the need for concurrent design of both material and structure. Students are faced with two options: textbooks that teach the theory of advanced mechanics of composites but lack computational examples of advanced analysis, and books on finite element analysis that may or may not demonstrate very limited applications to composites. But now there is a third option that makes the other two obsolete: Ever J. Barbero's *Finite Element Analysis of Composite Materials*. By layering detailed theoretical and conceptual discussions with fully developed examples, this text supplies the missing link between theory and implementation. In-depth discussions cover all of the major aspects of advanced analysis, including three-dimensional effects, viscoelasticity, edge effects, elastic instability, damage, and delamination. More than 50 complete examples, using mainly ANSYS but also including some use of MATLAB, demonstrate how to use the concepts to formulate and execute finite element analyses and how to interpret the results in engineering terms. Additionally, the source code for each example is available for download online. Cementing applied computational and analytical experience to a firm foundation of basic concepts and theory, *Finite Element Analysis of Composite Materials* offers a modern, practical, and versatile classroom tool for today's engineering classroom. **Revolutionary Materials**

The conference is organized by Wayne State University and American Society for Composites in cooperation with the U.S. Organizing Committee and the Japanese Organizing Committee. Since the Seventh Meeting in Kyoto in 1995, this meeting brings together accomplished composite researchers between the two countries to share latest developments and advances in the field. The scope of the current conference ranges over all aspects of composite materials, with some emphasis on infrastructure applications of composites. Key areas in composites are covered by 110 papers, with 35 presentations from Japan.
