Topics and features: describes methods and models for the analysis and evaluation of disaster resilient communication networks; examines techniques for the design and enhancement of disaster resilient systems; provides a range of schemes and algorithms for resilient systems; reviews various advanced topics relating to resilient communication systems; presents insights from an international selection of more than 100 expert researchers working across the academic, industrial, and governmental sectors. This practically focused monograph providing invaluable support on topics of resilient networking equipment and software is an essential reference for network professionals including network and networked systems operators, networking equipment vendors, providers of essential services, and regulators. The work can also serve as a supplementary textbook for graduate and PhD courses on networked systems resilience. *Advanced Artificial Intelligence*

And Robotics Prof. V.S. Manjula, 2025-04-08 The book is divided into six chapters. The behavioral perspective of human cognition is covered first, followed by a detailed discussion of the instruments and methods needed to make it intelligently possible for machines. Enough information has been addressed in the traditional chapters on search, symbolic logic, planning, and machine learning, including the most recent studies on the topics. The contemporary facets of soft computing have been presented from the very beginning and covered in a way that is somewhat informal, making it easy for a novice to understand. Non-monotonic and spatiotemporal reasoning, knowledge acquisition, verification, Non-monotonic and spatiotemporal thinking, knowledge acquisition, verification, validation, and maintenance challenges the realization of cognition on machines, and the design of AI machines are among the topics of AI research that are discussed in the book. The two case studies that conclude the book, one on criminal investigation of expert systems and the other on navigational planning of robots, focus mostly on the implementation of intelligent systems through the use of the techniques discussed in the book. *The National Guide to Educational Credit for Training Programs* American Council on Education, 2005 Highlights over 6 000 educational programs offered by business, labor unions, schools, training suppliers, professional and voluntary associations, and government agencies.
