The rapid advance of hardware computing power and AD tools has enabled practitioners to quickly generate derivative enhanced versions of their code for a broad range of applications in applied research and development. Automatic Differentiation of Algorithms provides a comprehensive and authoritative survey of all recent developments, new techniques and tools for AD use. The book covers all aspects of the subject: mathematics, scientific programming, i.e. use of adjoints in optimization and implementation, i.e. memory management problems. A strong theme of the book is the relationships between AD tools and other software tools such as compilers and parallelizers. A rich variety of significant applications are presented as well, including optimum shape design problems for which AD offers more efficient tools and techniques.
