The Origin of Mountains Cliff Ollier, Colin Pain, 2004-08-02 The Origins of Mountains approaches mountains from facts about mountain landscapes rather than theory The book illustrates that almost everywhere mountains arose by vertical uplift of a former plain and by a mixture of cracking and warping by earth movements and erosion by rivers and glaciers the present mountainous landscapes were created It also gives evidence that this uplift only occurred in the last few million years a time scale which does not fit the plate tectonics theory Another fascinating part of the evidence shows that mountain uplift correlates very well with climatic change Mountain building could have been responsible for the onset of the ice age It certainly resulted in the creation of new environments Fossil plants and animals are used in places to work out the time of mountain uplift which in turn helps to explain biogeographical distributions **CUET PG Geology, Earth Science - Question Bank (2400 MCQs Chapterwise)** Mocktime Publication, 2400 MCQs CUET PG Question Bank Geology Earth Science CUEG PG Previous Papers CUET PG Syllabus CUET PG Exam Pattern **ICSE Most Likely Question Bank Geography Class 9 (2022 Exam) - Categorywise & Chapterwise Topics, In-depth Concepts, Quick Revision** Oswal, 2021-06-21

Mountains, Climate and Biodiversity

Carina Hoorn, Allison Perrigo, Alexandre Antonelli, 2018-04-30

Mountains, Climate and Biodiversity: A comprehensive and up-to-date synthesis for students and researchers. Mountains are topographically complex formations that play a fundamental role in regional and continental scale climates. They are also cradles to all major river systems and home to unique and often highly biodiverse and threatened ecosystems. But how do all these processes tie together to form the patterns of diversity we see today? Written by leading researchers in the fields of geology, biology, climate and geography, this book explores the relationship between mountain building and climate change and how these processes shape biodiversity through time and space. In the first two sections, you will learn about the processes, theory and methods connecting mountain building and biodiversity. In the third section, you will read compelling examples from around the world exploring the links between mountains, climate and biodiversity. Throughout the 31 peer-reviewed chapters, a non-technical style and synthetic illustrations make this book accessible to a wide audience. A comprehensive glossary summarises the main concepts and terminology. Readership: Mountains, Climate and Biodiversity is intended for students and researchers in geosciences, biology and geography. It is specifically compiled for those who are interested in historical biogeography, biodiversity and conservation.
