Drawings for Architects Natascha Meuser,2015 The drawing architect for centuries this term was just as tautological as the baking baker or the gardening gardener Nevertheless in this compendium one has to begin with reference to the fact that the acquisition of drawing skills is by no means a minor field of study for architects Design methodology also referred to as methodology of space and the representation of the human body plays an important role once more in the present day field of architectural activity This book explores options for illustration as well as contemporary practice with architectural presentation It deals with the following topics The history and theory of architectural drawing covering a wide spectrum of issues in terms of art and architectural history examples are provided by two design collections ten architects present their architectural concepts based on a selection of drawing and presentation techniques ten exercises for freehand drawing demonstrative examples and practical exercises which illustrate technical drawing and the fundamental principles of perspective Architectural Studies Richard F. Koplar,1993 Koplar reduces the architectural portrayal to its most basic form the study and uses it to demonstrate fast abbreviated techniques that are highly effective in conveying a design idea From on the spot elevation sketches to intricate office complexes these quickly executed portrayals become a standard part of the design process rather than an after the fact presentation effort The result Time and cost savings for the design office and a marketable new skill for you
