Architecture S Le Corbusier:

Le Corbusier Le Corbusier, Alexander von Vegesack, Stanislaus von Moos, Arthur Rüegg, 2007 Le Corbusier is regarded as the most influential architect of the twentieth century This publication presents an overview of the Le Corbusier's work not only as an architect but as a designer of comprehensive ideas offering insight into his furniture interior design and art as a catalyst for the creative developments of his time *Le Corbusier: the Chapel at Ronchamp* Danièle Pauly, 1997-10-01 The pilgrimage church Notre Dame du Haut in Ronchamp 1950-54 an icon of modern architecture represents one of the central buildings of Le Corbusier's late period Like all the guides in this series this book is indispensable both for a specialist audience and for tourists interested in architecture and modern art **Kafka's Architectures** Ayad B. Rahmani, 2015-01-02

Adopting Kafka as a lens to examine modern concepts in architecture this book pries open new interpretations in Kafka scholarship Each of eight chapters takes up an architectural element with which to explore meanings central to both literature and architecture Stairs function as vertical access but in Kafka's hands become an instrument of science testing the merit of natural selection Kafka's doors open and close less to allow passage than to reconcile one psychological interior with the next Notions of plumbing and hygiene begin to acquire new meaning The architecture of Mies van der Rohe begins to make more sense especially his tabula rasa approach to design signifying less a harsh disdain for site and more a response to a reality in which the ceremony of the stairs had died and was replaced by the pervasive flatness of the modern floor

Architectures of Bureaucracy Jens van de Maele, 2025-01-27 This monograph examines the interrelationship between politics and modernist architecture in interwar Belgium focusing on political architectural and administrative elites as propagators of new ideas of governance While Belgium was strongly influenced by neighbouring France and Germany it also developed its own avant garde approaches to socio political problems In the second half of the 1930s the country was the scene of a remarkable political and architectural experiment involving an ambitious plan for the large scale construction of modernist government office buildings These buildings were seen as essential to the development of a technocratic model of governance aimed at strengthening the role of the executive and minimising the influence of parliament More specifically the efficient new office architecture was supposed to create a new type of perfect civil servant whose loyalties would no longer lie with political parties but with scientists and management experts Such experts and scientists constituted a rising elite of homines novi with strong though often veiled political ambitions As such this book contributes to our understanding of political culture in the age of extremes *Architectures of Existence* Chris Younès, 2023-08-09 Architectures of Existence proposes that philosophical thinking ecosophical thinking can inform the way we engage with our world and its inhabitants as architects designers and planners but also as individuals as people and as a society In *Art et existence* Maldiney states For us to inhabit is to exist This book aims to unfold extend articulate and thicken this postulate by interweaving architecture city landscape literature and philosophy It takes up the synergistic lines of long term research carried out from an ecosophical

perspective Such an attitude explores an art of existing in multiplicity singularity and openness manifesting the critical dimension through a reinterpretation of the knotting of the trajectories of time humanity and its becoming Insisting on what is between things and beings as well as on what is happening regenerating recycling reviving saving diversifying sparing recreating meditating and so caring These are all eco rhythms of a different type between human and non human to consider ourselves in the world In an era of uncertainty and climate threats this book develops the margins of possibility offered by the subject of architecture This book will be of interest to researchers and students of architecture urban planning and philosophy

Architectures Andrew Ballantyne, 2008-04-15 Architectures Modernism and After surveys the history of the building from the advent of industrialization to the cultural imperatives of the present moment Brings together international art and architectural historians to consider a range of topics that have influenced the shape profile and aesthetics of the built environment Presents crucial moments in the history of the field when the architecture of the past is made to respond to new and changing cultural circumstances Provides a view of architectural history as a part of a continuing dialogue between aesthetic criteria and social and cultural imperatives Part of the New Interventions in Art History Series which is published in conjunction with the Association of Art Historians

The Social Architecture of French Cinema, 1929-1939 Margaret C. Flinn, 2014 This book provides a vital new reading of documentary and realist fiction film of the French 1930s that focuses on how these genres interlock their representations of urban spaces and places

The Architectures of Childhood Roy Kozlovsky, 2016-03-16 Between 1935 and 1959 the architecture of childhood was at the centre of architectural discourse in a way that is unique in architectural history Some of the seminal projects of the period such as the Secondary Modern School at Hunstanton by Peter and Alison Smithson Le Corbusier's Unit d'Habitation at Marseilles or Aldo van Eyck's playgrounds and orphanage were designed for children At CIAM architects utilized photographs of children to present their visions for reconstruction The unprecedented visibility of the child to architectural discourse during the period of reconstruction is the starting point for this interdisciplinary study of modern architecture under welfare state patronage Focusing mainly on England this book examines a series of innovative buildings and environments developed for children such as the adventure playground the Hertfordshire school the reformed children hospital Brutalist housing estates and New Towns It studies the methods employed by architects child experts and policy makers to survey assess and administer the physiological emotional and developmental needs of the user the child It identifies the new aesthetic and spatial order permeating the environments of childhood based on endowing children with the agency and autonomy to create a self regulating social order out of their own free will while rendering their interiority and sociability observable and governable By inserting the architectural object within a broader social and political context The Architectures of Childhood situates post war architecture within the welfare state's project of governing the self which most intensively targeted the citizen in the making the children Yet the emphasis on the utilization of architecture as an instrument of power does not reduce it into a mere document of social policy as the

author uncovers the surplus of meaning and richness of experience invested in these environments at the historical moment
