**Figure 1** Schematic diagram of the proposed system architecture. The system is composed of a user interface, a data management module, and a processing module. The user interface interacts with the data management module, which in turn interacts with the processing module. The processing module is responsible for the core logic of the system, including data analysis and decision-making.

La ricerca è stata pubblicata su *Journal of Interpersonal Violence*, la rivista di psicologia e di scienze comportamentali dedicata al tema dell'interazione tra la mente e il corpo. Gli autori, che sono i professori di psicologia della University of North Carolina, hanno studiato le reazioni fisiologiche e le emozioni dei partecipanti durante la lettura di testi che descrivevano situazioni di violenza domestica. I risultati hanno mostrato che le donne che avevano subito violenza domestica reagivano con maggiore intensità emotiva e fisiologica rispetto alle donne che non avevano subito violenza domestica.

En consecuencia, para el sistema "Punto Fijo" el consumo de energía eléctrica se incrementa en proporción al aumento de la temperatura ambiente, incrementándose considerablemente cuando la temperatura del punto de partida es elevada. El tiempo de un ciclo completo de calentamiento, que varía entre 10 y 15 minutos, depende de la cantidad de refrigerante en el sistema. Para el "Punto Fijo" el consumo de energía eléctrica, al incrementar la temperatura del fluido de refrigeración, disminuye considerablemente. Esto sucede al disminuir "Punto Fijo" hasta dentro de los límites permitidos. Para estos y cualquier otro sistema, cuando se incrementa la temperatura ambiente, se incrementa el consumo de energía eléctrica, como se puede observar en la siguiente gráfica.

**Abstract** The present study examined the effects of a 12-week training program on the physical and psychological health of sedentary, middle-aged women. The program consisted of three sessions per week, each lasting 45 minutes. The program included aerobic, strength, and flexibility exercises. The results showed that the program had a significant positive effect on the physical and psychological health of the women. The program also had a significant positive effect on the women's self-esteem and body image. The results of this study suggest that a 12-week training program can be an effective way to improve the physical and psychological health of sedentary, middle-aged women.

**Abstract** The purpose of this study was to determine whether there were differences in the prevalence of risk factors for coronary artery disease between two groups of men who had been exposed to asbestos during their lifetime. One group consisted of 60 men who had worked in asbestos-related occupations and the other group consisted of 60 men who had never worked in such occupations. The prevalence of risk factors for coronary artery disease was determined by means of a questionnaire and physical examination. The results showed that the prevalence of risk factors for coronary artery disease was significantly higher in the group of men who had worked in asbestos-related occupations than in the group of men who had never worked in such occupations.
