This book explores various facets of the transition to renewable energy in the Arctic region. It critically examines the adverse effects of fossil fuel extraction and use, environmental and social impacts of climate change, and the possibility of a low carbon energy system through innovation and technology. Drawing together a diverse range of contributors and considering a range of new energy sources, this volume also looks at the scale of the transition challenges in the Arctic, energy production and use, the necessary flexibility to balance energy demand and supply, the need for a more integrated energy infrastructure, and the new energy business models, health and safety, and quality standards for the region. Finally, it examines the transit and influence between Arctic and non-Arctic countries in terms of growth, partnerships, and new dynamics of a transitioning process to a sustainable energy system. Focusing on specific case studies that represent the most relevant energy projects in the region, this book will be of great interest to students and scholars of energy policy and transitions, climate change, global business, and sustainable development. Animal Migration E.J. Milner-Gulland, John M. Fryxell, Anthony R.E.

Sinclair, 2011-01-13. Migration is a fascinating phenomenon that can contribute to the fundamental structuring of ecosystems. This seminal volume synthesises insights from both mathematical modelling and empirical research in order to generate a unified understanding of the mechanisms underlying migration.
