(A) What is atmosphere ?

Answer: Atmosphere is the thick blanket of air that surrounds the surface of the earth. It is divided into different layers.

(a) Troposphere: It is the first layer of the atmosphere that is just above the surface of the earth. The air that we breathe is present in this layer. This supports life on the earth.

(b) Stratosphere: Above the troposphere lies the stratosphere. It extends up to a height of 50 km. The ozone layer is present in this layer. Airplanes fly in this layer.

(c) Mesosphere: This is the third layer of the atmosphere. It lies above the stratosphere. It extends up to the height of 80 km. Meteorites burn up in this layer on entering from the space.

(d) Thermosphere: In thermosphere temperature rises very rapidly with increasing height. Ionosphere is a part of this. This layer helps in radio transmission.

(e) Exosphere: The upper most layer of the atmosphere is known as exosphere. This layer has very thin air.

questionable because they do not acknowledge the peculiar and unique challenges of climate prediction Furthermore the widespread availability of computer simulations often leads to research becoming divorced from understanding something that risks undermining the relevance of research conclusions This book takes the reader on a journey through the maths of complexity the physics of climate philosophical questions regarding the origins and robustness of knowledge and the use of natural science in the economics and policy of climate change *Nuclear Science Abstracts*, 1974 **The Sovereign God**
