
Gel Electrophoresis Lab Questions and Answers Rated A+

What happens when DNA enters the gel—does it have a “map” to follow?

✓✓DNA doesn't need a map; it travels through the gel based on its size, zipping toward the positive end as it follows the electric current.

How does the gel feel like a “party” for DNA fragments?

✓✓The gel is like a crowded party where smaller DNA fragments can weave through the crowd easily, while larger ones struggle to get through the door.

What's the secret ingredient in the buffer that keeps DNA comfortable during its journey?

✓✓The buffer solution contains salts and a stable pH that creates a friendly environment, ensuring the DNA moves smoothly without getting “stressed out.”

Why might the DNA fragments act like children at a race?

✓✓In gel electrophoresis, smaller fragments are like sprinters who dash ahead, while larger ones might take their time, trying to squeeze through a crowded course!
