

1. What is the distance between a 128 kg object and a 136 kg object if the gravitational force of attraction between them is 6.582×10^{-10} N?

$$6.582 \times 10^{-10} = \frac{G(128)(136)}{r^2}$$

$$r^2 = \frac{G(128)(136)}{6.582 \times 10^{-10}}$$

$$r^2 = 1764.07$$

$$r = 42 \text{ m}$$

2. The force of gravity between two objects is 1200 N when the objects are 60 m apart. Find the force of gravity between the objects when they are 480 m apart.

Inverse square law:

Objects further apart, $F_g \downarrow$

$480 \div 60 = 8 \times$ further apart, so F_g is $8^2 = 64 \times$ smaller

$$1200 \div 64 = 18.8 \text{ N}$$

3. Two students are on a skateboards and push away from each other. A 48 kg student accelerates away at 2.6 m/s^2 . Find the acceleration of the other student if their mass is 32 kg. Action-reaction forces

$$F_{net} = ma$$

$$F_{net} = 48(2.6)$$

$$F_{net} = 124.8 \text{ N}$$

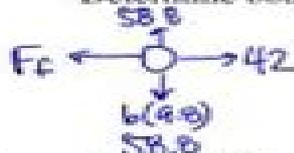

F_{net} is the same for both students

$$F_{net} = ma$$

$$124.8 = 32a$$

$$a = 3.9 \text{ m/s}^2$$

4. A 42.0 N force is applied to a 6.00 kg block but it only accelerates at 5.50 m/s^2 . Determine both the force and the coefficient of friction.

$$F_{net} = ma$$

$$42 - F_f = 6(5.5)$$

$$42 - F_f = 33$$

$$F_f = 9.0 \text{ N}$$

$$F_f = \mu F_N$$

$$9.0 = \mu(58.8)$$

$$\mu = 0.153$$

5. A go-cart, traveling at 65 km/h , skids to a stop. If the coefficient of friction between the tires and the asphalt is 0.59, how far does the go-cart skid?

no forwards force!

$$F_{net} = ma$$

$$F_f = ma$$

$$\mu F_N = ma$$

$$\mu mg = ma$$

$$\mu g = a$$

$$0.59(9.8) = a$$

$$a = 5.782$$

$$v_f^2 - v_i^2 = 2ad$$

$$v_f = 0$$

$$d = ?$$

$$a = -5.782$$

$$t = x$$

$$v_f^2 - v_i^2 = 2ad$$

$$d = 28.2 \text{ m}$$

Elementary Quantum Mechanics: With Problems And Solutions Stephen Wiggins,2025-02-25 The impact of quantum mechanics on our day to day life is growing at an exponential rate of which most people are unaware For example the toaster is a prime example of a quantum mechanical device While quantum mechanics arose as a subject in physics quantum mechanical thinking has had and continues to have a broad impact on mathematics For example operator theory as we know it today would not exist without von Neumann s effort to put quantum mechanics on a solid mathematical foundation This book is defined for undergraduate students of mathematics to obtain an introduction to quantum mechanical ideas and the associated mathematics without requiring an extensive background in physics This book is focused around the following topics 1 The Mathematical Structure of Quantum Mechanics We develop the main mathematical structure of quantum theory in the setting of the accepted postulates of quantum mechanics Dirac s bra ket notation for the required linear algebra aspects will be utilized as well as the mathematical and physical implications arising from the mathematical aspects of self adjoint linear operators with emphasis on the finite dimensional setting 2 Dynamics of a Quantum Particle We introduce the Schrodinger equation and discuss its physical meaning and mathematical structure The required partial differential equations theory is elementary and will be developed from scratch 3 Measurement Time Evolution Uncertainty and the Harmonic Oscillator This builds on the previously developed mathematics and culminates with a detailed discussion of the quantum mechanical workhorse example the harmonic oscillator 4 Quantum Mechanics of Angular Momentum Most of the book is developed in the context of the relatively simple one dimensional quantum systems This topic goes into three dimensions and illustrates how very interesting mathematics can yield novel physical explanations that are unobtainable with classical methods 5 The Postulates of Quantum Mechanics Measurement Composite Systems Tensor Products and Entanglement This is the area that most students have heard of quantum entanglement action at a distance and Bell s inequality The mathematics will be at an elementary level except possibly for tensor products which are sadly neglected many linear algebra courses today but which are literally exploding in a variety of current applications **Education pamphlets** ,1925 **Quantum (Un)speakables** R.A. objective picture of the world That way Bell hoped one would be able to arrive at a physics where measurement would not play such a central role as in the Copenhagen interpretation of quantum mechanics Then a most interesting sequence of events set in In 1952 David Bohm had achieved something which had earlier been proclaimed impossible It had been proved by John von Neumann that no hidden variable theory could agree with quantum mechanics Bohm actually formulated such a theory where each particle at any time has both a well defined position and a well defined momentum The conflict raised between von Neumann and Bohm was elegantly resolved by Bell who showed that von Neumann s proof contained a physically unjustifiable assumption So while John Bell had flung open the door widely for hidden variable theories he immediately dealt them a major blow In 1964 in his celebrated paper On the Einstein Podolsky Rosen Paradox he showed that any hidden variable theory which obeys Einstein s requirement of locality i e *John Holt* Roland Meighan,2014-10-23 John Holt the American educator was passionate about the need for alternatives to traditional institutional schooling seeing schools as often hindering children from learning rather than helping them he became an important proponent of homeschooling or unschooling was a pioneer in youth rights theory and had a profound influence on school reform in particular and educational philosophy in general Here Roland Meighan challenges the often held notion that Holt s work was romantic and impractical within the context of compulsory schooling He brings together the work and thinking of John Holt into applicable theory for education students enabling readers to appreciate the view that individuals outside the education system can influence and change what is happening within it **Hearings on H.R. 2603 ...
