Computer Aided Design Guide for Architecture, Engineering and Construction Ghassan Aouad, Song Wu, Angela Lee, Timothy Onyenobi, 2013-06-17 Recent years have seen major changes in the approach to Computer Aided Design (CAD) in the architectural engineering and construction (AEC) sector. CAD is increasingly becoming a standard design tool, facilitating lower development costs and a reduced design cycle. Not only does it allow a designer to model designs in two and three dimensions but also to model other dimensions such as time and cost into designs. *Computer Aided Design Guide for Architecture Engineering and Construction* provides an in-depth explanation of all the common CAD terms and tools used in the AEC sector. It describes each approach to CAD with detailed analysis and practical examples. Analysis is provided of the strength and weaknesses of each application for all members of the project team, followed by review questions and further tasks. Coverage includes 2D CAD, 3D CAD, 4D CAD, nD modelling, Building Information Modelling, parametric design, virtual reality and other areas of future expansion. With practical examples and step-by-step guides, this book is essential reading for students of design and construction from undergraduate level onwards.

Building Information Modelling (BIM) in Design, Construction and Operations II A. Galiano-Garrigos, L. Mahdjoubi, C.A. Brebbia, 2017-08-09 The papers presented at Building Information Modelling 2017 BIM are from a range of forums including plenary papers, workshops, seminars and panel sessions. The conference was attended by experts from industry practice and academia sharing their work on key topics: the development of innovative solutions and the identification of future trends. The volume gives details of how BIM tools and techniques have fundamentally altered the manner in which modern construction teams operate, the processes through which designs are evolved and the relationships between conceptual detail construction and life cycle stages. BIM is essentially value creating collaboration throughout the entire life cycle of an asset, underpinned by the statistics attached to them and has far-reaching consequences on both building procurement and infrastructure. BIM 2017 papers cover topics such as BIM in design coordination, Construction operations, Building operation and maintenance, BIM and sustainability, Collaborative working and practices, Facilities management, integration and GIS integration, Automation in construction, Health and safety, BIM and interoperability, Life cycle project management, Cultural heritage, BIM and Robotics, Risk analysis and management and Emergency analysis, planning and management.
