

Yale Art and Architecture Building | New Haven, Connecticut, USA

Paul Rudolph | 1963

Designed and constructed during Paul Rudolph's tenure as chief of the architecture department, the iconic Art and Architecture Building (AAB) unites three levels around a central core of open, collective spaces, enclosed by a series of double-curtain walls. The exterior, which combines classical

elements and modern forms, particularly heavy, produces a variety of mixed and varied meanings and interpretations, most notably among the separate central atrium spaces and galleries, and the more peripheral and compressed studies and offices. Fragmented walls, bridges, and offset walkways for circulation among

adjacent spaces while allowing for complex views through large, steel-framed glass windows from deep within the exterior. Blurred lines of heavily textured, both horizontal and vertical, provide structural support for horizontal platforms, these mechanical services, and various work circulation. All the open

work, the play of horizontal planes goes up to enclosed lecture halls that bridge the vertical spaces to achieve the open below. Between these volumes is a collection of skylights and overhangs that bridge, extending the central space of this complex combination of architectural types.

Barrier-Free Design James Holmes-Seidle,2012-08-21 This book for architects interior designers building managers students conference organisers looks at first principles to provide the user with the tools to make their own decisions rather than a cookbook approach It is intended that designs and product information can be taken straight from the manual and inserted into ongoing projects For the first time the book considers the needs of people with visual hearing and mental disabilities who make up the majority of disabled people in the population alongside those of people with physical mobility disabilities Practical low cost solutions to retro fitting existing buildings are discussed as well as the methods used to assess the suitability of an existing building and assembling a project to improve access for disabled people Specific products and designs are illustrated and discussed with full working technical drawings and full specification details These will reduce considerably the research time needed to produce a cost effective solution that will improve access for disabled people A perspective of the standards and legislation dealing with access issues in the UK is compared with those in other countries and the standards mentioned are compared with the realities of practical implementation carried out in 4 years of design in this area Museum Buildings Hans Wolfgang Hoffmann,2016-03 The museum as a building type and architectural space bear a complex relationship to each other Architecture competes with the exhibited objects on the one hand and gives way to them on the other enabling the museum to develop as regards content This manual guide has its point of departure between

both poles and targets both designers and users The aim of the publication is to facilitate communication in the planning process of a museum whether this is during the conceptual stage the competition or the design and construction phase In addition to an introduction on the architectural history of the museum the authors examine the key planning parameters involved in the conception and design of a contemporary museum Buildings and projects provide inspiration for individual design work 0
