Reid, 2008-05-08 Addressing the use of geoinformatics in Caribbean archaeology, this volume is based on case studies drawn from specific island territories, namely Barbados, St. John, Puerto Rico, Jamaica, Nevis, St. Eustatius, and Trinidad and Tobago, as well as inter-island interaction and landscape conceptualization in the Caribbean region. Geoinformatics is especially critical within the Caribbean where site destruction is intense due to storm surges, hurricanes, ocean and riverine erosion, urbanization, industrialization, and agriculture, as well as commercial development along the very waterfronts that were home to many prehistoric peoples. By demonstrating that the region is fertile ground for the application of geoinformatics in archaeology, this volume places a well-needed scholarly spotlight on the Caribbean.
