Estimating Animal Abundance D.L. Borchers, Stephen T. Buckland, Walter Zucchini, 2013-03-09 We hope this book will make the bewildering variety of methods for estimating the abundance of animal populations more accessible to the uninitiated and more coherent to the cogniscenti We have tried to emphasize the fundamental similarity of many methods and to draw out the common threads that underlie them With the exception of Chapter 13 we restrict ourselves to closed populations those that do not change in composition over the periods being considered Open population methods are in many ways simply extensions of closed population methods and we have tried to provide the reader with a foundation on which understanding of both closed and open population methods can develop We would like to thank Miguel Bernal for providing the St Andrews example dataset used frequently in the book Miguel Bernal and Jeff Laake for commenting on drafts of the book Jeff Laake for providing Figure 10.1 NRC Research Press for allowing us to use Figures 10.2 10.3 10.4 10.5 10.6 and 10.7 the International Whaling Commission for allowing us to use Figure 12.1 Sharon Hedley for providing Figures 12.1 and 12.2 D.L.B. is eternally indebted to Carol Alice and Aidan for their support through writing the book and for the many evenings and weekends that it has taken from them *Environmental Modelling* John Wainwright, Mark Mulligan, 2005-04-08 Simulation models are increasingly used to investigate processes and solve practical problems in a wide

variety of disciplines eg climatology ecology hydrology geomorphology engineering Environmental Modelling A Practical Approach addresses the development testing and application of such models which apply across traditional boundaries and demonstrate how interactions across these boundaries can be beneficial Provides a general overview of methods and approaches as well as focusing on key subject areas written by leading practitioners in the field Assesses the advantages and disadvantages of different models used and provides case studies supported with data output tutorial exercises and links to the model and or model applications via the book s website Covers major developments in the field eg the use of GIS and remote sensing techniques and scaling issues As associated website contains colour images as well as links to [www resources](#)
