Routledge Handbook of Environment and Society in Asia Paul G. Harris, Graeme Lang, 2014-09-19 Nowhere is the connection between society and the environment more evident and potentially more harmful for the future of the world than in Asia In recent decades rapid development of Asian countries with very large populations has led to an unprecedented increase in environmental problems such as air and water pollution solid and hazardous wastes deforestation depletion of natural resources and extinction of native species This handbook provides a comprehensive survey of the cultural social and policy contexts of environmental change across East Asia The team of international experts critically examine a wide range of environmental problems related to energy climate change air land

water fisheries forests and wildlife The editors conclude that with nearly half of the human population of the planet and several rapidly growing economies most notably China Asian societies will determine much of the future of human impacts on the regional and global environments As climate change related threats to society increase the book strongly argues for increased environmental consciousness and action in Asian societies This handbook is a very valuable companion for students scholars policy makers and researchers working on environmental issues in Asia
