South African Accounting Education Stocktake Jaco Fouchè, Nico van der Merwe, 2020-04-07 This book is intended to take stock of the current state of accounting education with a specific emphasis on the South African situation. It provides a critical overview of the current published research and identified gaps. Through this it aims to equip accounting academics with information and tools to motivate them to research the field of accounting education to improve teaching and learning. It also aids in the identification of suitable research topics in this regard and highlights potential pitfalls in researching accounting education. The book therefore focuses on accounting educators as specialists in their respective disciplines. Different authors with a keen interest in a specific area relating to accounting education research wrote each chapter in this book. It forms a planned collective work assembled by appropriately qualified and experienced scholars in the accounting education field which generates a new conceptual synthesis that advances scholarship of accounting education research since no such synthesis currently exists for accounting education research in South Africa.

The Voynich Manuscript as an Example of

Oligo-Agglutinative Pasigraphy, Vol. I: A Fuzzy Set Approach to Decryption Steve Bolton, Class III problems are considered practically unsolvable in cryptology but none has resisted cryptanalytic attack as persistently as the Voynich Manuscript. In the first installment of this 4 volume set we present the linguistic and affix analysis that preceded the first complete but approximate translation of the entire manuscript. This contrasts with the piecemeal approach of all prior solutions that resulted in wildly divergent translations of minuscule selections of the text. This systemic attack on the entirety of the text and its unusual distributional features such as extreme platykurtia which forbid translation into any natural language resulted first in superior transcription stability and an equally stable symbol set based on intensive statistical analysis. The encoding scheme employs a 20/22 letter alphabetic script that most closely resembles a slot and filler top down a priori pasigraphic system with oligo agglutinative features that are currently only considered a theoretical possibility in the linguistics field. The intricate affixing system is based mainly on precise placement of single letters to denote case roles semantic classes and 3 primary parts of speech exhibiting a strong noun surfeit. At the phrase level we find dominant SOV order and head final dependent marked grammar compatible with heavily formatted inline pharmaceutical lists. These result in short ranges of actionable information which no competing solution can claim. Plant descriptions are demoted in

comparison to other herbals in favor of processing and dispensing details This approximate solution is based on fuzzy set analysis techniques integrated with linguistic universals a wide range of common statistics Pareto and Sukhotin scores Zipf slopes Indexes of Coincidence Agglutination and Synthesis and dozens of others and many home brewed fuzzy algorithms implemented in T SQL and VB Net after the inadequacy of many advanced data mining techniques was demonstrated Our methodology was validated when the project reached an inflection point beyond which we were able to predict the identities and properties of plants based on the text alone The project ended with plausible identification candidates for 121 of 126 herbal section plants and 7 others elsewhere in the manuscript far beyond that of other published solutions An incredible 100% of the 133 identified plants have dermatological uses These can be divided into prominent subtopics like treatment of bites anthelmintics rheumatism and other musculo skeletal ailments inflammatory skin disorders external and possibly menstrual bleeding excision of blemishes application of cosmetics and cures dispensable in baths The centerpiece of the manuscript is the Rosette Folio which depicts the grand design of a medieval bathhouse keyed to specific astrological timings also defined by satellite diagrams following a precedence hierarchy Each of these uses exhibit telltale polygraph correlations that fall into a handful of semantic hierarchies constructed from highly similar bases such as skin color based diagnostic criteria remedies solutions problems diseases plant parts and the like These findings require 2 volumes to demonstrate and another volume of data and other supplementary material Despite this complexity they culminate in a drastic simplification of the script and the first ever comprehensive translation of the Voynich Manuscript in Volume IV albeit at low resolution

About Clue Game: The clue is a classic board game for players ages eight and up. The game takes about an hour to play and calls for three to six players to investigate a murder. The winner is the player who through the process of elimination can figure out which three cards are hidden within the secret envelope that hold the answers to Mr Boddy's murder.

Moving on the squares: The character Miss Scarlet always takes the first turn in Clue. After Miss Scarlet starts the game, go clockwise around the table for turns. A player rolls the die and moves the playing piece on the yellow or white squares. Boards may have different colored squares. The squares are like the hallways of the mansion. Players can move only horizontally or vertically but never diagonally. Moving into rooms: One of the game's goals is to make your piece move into a room so you can make suspect suggestions to gather more clues. You can walk into a room through a doorway as long as the die you roll has the number you need to reach the room. Multiple players can be in the same room. Players can also jump into a room through a secret passage instead of rolling the die. Moving out of rooms: There are three ways a player can move out of a room. You can throw the die and exit through a doorway. You can exit through one of the room's secret passages. Or if you're a suspect, your piece will be automatically transferred to another room where you're thought to have killed Mr Boddy. Once you move your piece into a room, you can suggest helping eliminate suspect possibilities by guessing the murderer, murder weapon, and murder location.
