Gross, Richard Caprioli, 2006-12-21 Volume 6 Ionization Methods captures the story of molecular ionization and its phenomenal evolution that makes mass spectrometry the powerful method it is today Chapters 1 and 2 cover fundamentals and various issues that are common to all ionization e.g. accurate mass isotope clusters and derivatization Chapters 3-9 acknowledge that some ionization methods are appropriate for gas phase molecules and others for molecules that are in the solid or liquid states Chapters 3-6 cover gas phase molecules dividing the subject into 1 ionization of gas phase molecules by particles e.g. EI 2 ionization by photons 3 ionization by ion molecule and molecule molecule reactions e.g. APCI and DART and ionization in Strong electric fields i.e. Electrohydrodynamic and Field Ionization Desorption Ionization in a Strong Electric Field illustrates the transition to ionization of molecules in the solid or liquid states covered in Chapters 7-9 1 spray methods for ionization e.g. electrospray 2 desorption ionization by particle bombardment e.g. FAB and 3 desorption by photons e.g. MALDI Electrospray and MALDI also lead to applications in biophysical chemistry the theme of Chapter 10 Chapter 11 reconsiders ionization from the view of choosing an ionization method The range of subjects is from ionization of organic and biomolecules to the study of microorganisms Development of New Tools for Solid-phase Organic Library Synthesis Simon Kelly Shannon, 2003

Development of Microscopy Ambient Ionization Top-down Mass Spectrometry Cheng-Chih Hsu, 2014 There is an immense cellular and molecular heterogeneity in biological system For example during the embryonic development the progenitor cells could differentiate into varieties type of cell due to the gradient of chemical stimulus Once the cell fate is determined the metabolomics and proteomic features of the cell will subsequently alter Knowing the details of the molecular interplays between cellular and chemical heterogeneities is crucial in the understanding of the complex biological system Mass spectrometry provides a way of label free strategy to obtain the chemical information In the recent decades considerable amounts of new ionization methods were developed for the use of mass spectrometric analysis on biological system Among those methods those so called soft ionization techniques such as matrix assisted laser desorption MALDI and electrospray ionization ESI have been greatly utilized for biomedical studies However some technical limitations currently

hinder the application to the more general biology society First the spatial mass spectrometric measurement is solely based on passive imaging processes In this regard a real time chemical investigation guided by the histological measurement e g optical microscopy is difficult Second high sensitive instruments that allow detection of full molecular weight range e g covering small metabolites lipids and proteins are rare and hardly used for imaging Third ionization methods for surface analysis are challenging for soft biological samples e g bacterial colonies at their native states My thesis work is the development of mass spectrometry based tools that are less limited by the abovementioned aspects and to extend the potential use of mass spectrometry In Chapter 1 I will briefly review the current progress of the development on ambient ionization techniques as well as the emergence of their applications to biological system Chapter 2 describes how I interfaced an inverted fluorescence microscope with an ambient ionization source nanoDESI so that the molecular information was obtained via the guidance of microscope directly on glass slides Endogenous molecules as large as hemoglobin could be characterized without immunostaining This is for the first time that proteins on ex vivo tissue sections could be identified using ambient mass spectrometry Using this platform we found unique molecular patterns that only express at certain embryonic stages In Chapter 3 a new ways of microbial metabolomics are introduced using a different surface flow probe Chapter 4 we further applied the microscope mass spectrometry interface to study bats with white nose syndrome Key molecules that may be causal to the devastating disease are found Lastly Chapter 5 put forth a future direction how tools described in the thesis can be extended to cancer pathology
