Ambulation Analysis in Wearable ECG Subhasis Chaudhuri, Tanmay D. Pawar, Siddhartha Duttagupta, 2009-07-21
Ambulation Analysis in Wearable ECG demonstrates why due to recent developments the wearable ECG recorder substantiates a significant innovation in the healthcare field. About this book: Examines the viability of wearable ECG in cardiac monitoring. Includes chapters written by practitioners who have personally developed such hardware to write about the hardware details. Bridges the gap between hardware and algorithmic developments with chapters that specifically discuss the hardware aspects and their corresponding calibration issues. Presents a useful text for both practitioners and researchers in biomedical engineering and related interdisciplinary fields. Assumes basic familiarity with digital signal processing and linear algebra. *ECG Acquisition and Automated Remote Processing* Rajarshi Gupta, Madhuchhanda Mitra, Jitendranath Bera, 2013-09-11
The book is focused on the area of remote processing of ECG in the context of telecardiology, an emerging area in the field of Biomedical Engineering Application. Considering the poor infrastructure and inadequate numbers of physicians in rural healthcare clinics in India and other developing nations, telemedicine services assume special importance. Telecardiology, a specialized area of telemedicine, is taken up in this book considering the importance of cardiac diseases which is prevalent in the population under discussion. The main focus of this book is to discuss different aspects of ECG acquisition, its remote transmission, and computerized ECG signal analysis for feature extraction. It also discusses ECG compression and application of standalone embedded systems to develop a cost-effective solution of a telecardiology system.

Wearable Systems Based Gait Monitoring and Analysis Shuo Gao, Junliang Chen, Yanning Dai, Boyi Hu, 2022-03-16
Wearable Systems Based Gait Monitoring and Analysis provides a thorough overview of wearable gait monitoring techniques and their use in health analysis. The text starts with an examination of the relationship between the human body's physical condition and gait and then introduces and explains nine mainstream sensing mechanisms including piezoresistive, resistive, capacitive, piezoelectric, inductive, optical, air pressure, EMG, and IMU-based architectures. Gait sensor design considerations in terms of geometry and deployment are also introduced. Diverse processing algorithms for manipulating sensors' outputs to transform raw data to understandable gait features are discussed. Furthermore, gait analysis-based health monitoring demonstrations are given at the end of this book, including both medical and occupational applications. The book will enable students of biomedical engineering, electrical engineering, signal processing, and ergonomics, and practitioners to understand the medical and occupational applications of engineering-based gait analysis and falling injury prevention methods.
