

# What is MOC?

The Maintenance of Certification (MOC) program demonstrates to the public, your peers, and colleagues your support for continuous quality improvement, professional development, and quality patient care. It is an integral part of the quality movement in healthcare and is highly valued by patients and physician colleagues alike. MOC builds on the validity of the initial certification process and provides a framework for self-regulation by the profession to improve quality of care. The program embraces the adult learning principles of accumulated life experience, self-direction, goal-orientation, achievability, and respect for diplomate/achievees.

MOC encompasses the essential competencies involved in delivery of quality care, which extend beyond medical knowledge. The MOC program must be developed and maintained throughout your professional career. It is designed to evaluate, on a continuing basis, the six essential competencies initially developed in residency training by means of four parts. The six competencies are:

- **Medical knowledge**
- **Patient care and procedural skills**
- **Interpersonal and communication skills**
- **Professionalism**
- **Practice-based learning and improvement**
- **Systems-based practice**

MOC uses four parts to evaluate the six competencies:

- **Part 1: Evidence of professional standing**
- **Part 2: Lifelong learning and self-assessment**
- **Part 3: Cognitive expertise**
- **Part 4: Practice quality improvement**

For more information on the evidence for MOC, visit the ABRM MOC Evidence Library at [www.abrm.org/moc/evidence-library](http://www.abrm.org/moc/evidence-library).

## Part 1: Evidence of Professional Standing

This part requires valid, unrestricted licensure to practice medical physics in all states requiring licensure of medical physicists (IL, HI, MI, TX). Any state board action against a licensee must be reported by the diplomate to the board within 60 days.

If not licensed, letters of attestation from an ABR-certified medical physicist and an ABR-certified radiologist or radiation oncologist are required. The requested statements will attest to the diplomate's active involvement in the discipline of medical physics, with specific emphasis on the six areas of competency. Forms to provide guidance and to assist in the attestation process are available on myABR (<http://my.abrm.org/moc/evidence>).

## Part 2: Lifelong Learning and Self-assessment

At least 75 continuing education (CE) credits are required every 5 years. CE credits may be met by a combination of Category 1 credits (CME/PD or ADOME) and self-directed educational projects (SDEPs).

At least 25 of the 75 CE credits must be self-assessment CE (SA-CE). Other than ABR prequalified LAMs and SDEPs, the ABR will count all ABR Category 1 CME activities in "structured material" (including web-based and print) and "journal-based CME" formats toward the MOC self-assessment requirement. According to the recently adopted ABR policy for CME, these activities include the following features that will permit for use as self-assessment tools:

- They provide an assessment of the learner that focuses achievement of the educational purpose and/or objective(s) of the activity with an established minimum performance level; examples include, but are not limited to, patient management

case studies, a post-test, and/or the application of new concepts in response to simulated problems.

- They communicate to the participants the minimum performance level that must be demonstrated in the assessment to successfully complete the activity for ABR MOC Category 1 Credit™.
- They provide a reference to appropriate bibliographic sources to allow for further study.

A maximum of one SDEP may be recorded yearly and can count toward either CE or SA-CE. Fifteen CE credits are given for each completed SDEP and project samples can be found on the ABR website. The approach to each project is prospective and must be defined in advance. The components of the SDEP include:

**Significance:** a statement of educational need  
**Approach/Intention to be utilized:** a list of activities designated to address the need  
**Evaluation:** documentation of achievement  
**Impact on practice/outcome statement**

For more information on Part 2 requirements, go to [www.abrm.org/moc/evidence](http://www.abrm.org/moc/evidence).

## Part 3: Cognitive Expertise

This part requires having passed the MOC exam within the past 10 years. The exam will be structured, secure, and computer-based. Approximately 30 percent of the material on the examination is core diagnostic, nuclear, or therapeutic (dependent on certificate) medical physics, technology, and safety. The rest is taken from recent advances in each respective field. The exam for the maintenance of any certificate in medical physics is offered one time each year. An exam must be taken in each discipline in which the diplomate is maintaining certification.

Diplomates may take the exam any time it is offered

during the MOC process, including multiple times if necessary. Study guides have been prepared and posted on the ABR website for each medical physics certificate area and are meant to help with preparing for the exam. The guides are not all inclusive, but indicate the general topics that will be included on each respective exam.

## Part 4: Practice Quality Improvement (PQI)

The analysis and improvement of medical physics practice is an important aspect of the activities of medical physicists. Through Part 4, MOC also offers a pathway for participation in practice quality improvement (PQI). The PQI initiative is a framework to facilitate improvement of medical care and/or its delivery for an individual, a group, in an institution. Quality and safety in medical care have become a national priority, and Part 4 of MOC permits medical physicists to demonstrate both their commitment to this enterprise and, in some instances, their compliance with associated external requirements.

The diplomate will engage in one PQI project every 3 years. Sample PQI projects for each of the three sections of medical physics are posted on the ABR website. The ABR will review and qualify national programs developed by professional societies for fulfillment of the criteria of Part 4. In addition, diplomates can formulate and execute specific PQI projects of their own design that would satisfy the PQI requirements in achieving continuous quality improvement within individual practice.

Projects can be developed by individuals, group practices, hospitals, institutions, or societies. The five areas for PQI project choices are:

- **Patient safety**
- **Accuracy of interpretation and calculations**
- **Report turnaround times**
- **Practice guidelines and standards**
- **Storage**
