McElroy,2009-12-21 The book offers a comprehensive account of how the world evolved to its present state in which humans now exercise a powerful in many cases dominant influence for global environmental change It outlines the history that led to this position of dominance in particular the role played by our increasing reliance on fossil sources of energy on coal oil and natural gas and the problems that we are now forced to confront as a result of this history The concentration of carbon dioxide in the atmosphere is greater now than at any time over at least the past 650 000 years with prospects to increase over the next few decades to levels not seen since dinosaurs roamed the Earth 65 million years ago Comparable changes are evident also for methane and nitrous oxide and for a variety of other constituents of the

atmosphere including species such as the ozone depleting chlorofluorocarbons for which there are no natural analogues. Increases in the concentrations of so called greenhouse gases in the atmosphere are responsible for important changes in global and regional climate with consequences for the future of global society which though difficult to predict in detail are potentially catastrophic for a world poorly equipped to cope. Changes of climate in the past were repetitively responsible for the demise of important civilizations. These changes however were generally natural in origin in contrast to the changes now underway for which humans are directly responsible. The challenge is to transition to a new energy economy in which fossil fuels will play a much smaller role. We need as a matter of urgency to cut back on emissions of climate altering gases such as carbon dioxide while at the same time reducing our dependence on unreliable potentially disruptive though currently indispensable sources of energy such as oil the lifeblood of the global transportation system. The book concludes with a discussion of options for a more sustainable energy future highlighting the potential for contributions from wind sun biomass geothermal and nuclear supplanting currently unsustainable reliance on coal oil and natural gas. Kiplinger's Personal Finance, 2006. Climate Change Bruce E. Johansen, 2017-09-15. This three volume set presents entries and primary sources that will impress on readers that what we do or don't do today regarding climate change will dramatically influence what life on this planet will be like for untold numbers of generations. How are the behaviors of birds butterflies and other migratory animals connected to climate change? What does the term thermal inertia mean and what does this geophysical effect have on predicting what the planet's future will be like? What is the context for the effects we are seeing on various forms of animal life from migrating birds to polar bears to mosquitoes that transmit Zika and other diseases? Climate Change: An Encyclopedia of Science, Society and Solutions combines entries describing Earth's variable climatic history references to scientific literature weather record data and selected primary documents to present readers with a comprehensive account of global warming's effects worldwide. By examining verifiable quantitative information such as the frequency and intensity of hurricanes and changes in the hydrological cycle as well as clear patterns and trends of alternating droughts and deluges and wildfires melting ice and rising seas readers will be able to understand why scientists are so concerned about the future of our climate. Researchers will benefit from detailed explanations of scientific topics such as thermal inertia feedbacks and tipping points and receive invaluable context on the role of energy use in climate change including automobiles and air travel. Readers will learn about the role of China in the current global climate and in the future the widespread effects of climate change on agriculture and how indigenous peoples' lives are being impacted from drought and the Navajos to hunters' lives in the Arctic. The work concludes with thought provoking debates regarding potential solutions from wind power and solar power to geo engineering. **Post-Oil Energy Technology** Bela G. Liptak, 2018-10-08. A solution to the climate and energy crisis. The reversible fuel cell RFC described in this volume stores solar energy and thereby makes it continuously available. This can make the building of energy free homes and all electric transportation a reality. The foldout drawing at the back of

this book also describes the detailed design of the world's first 1 000 megawatt solar hydrogen power plant How is this possible Our planet receives more solar energy in an hour than humans use in a year In fact 5% of the Sahara could meet the total energy requirement of mankind This energy can then be stored and transported in the form of hydrogen Converting from an exhaustible energy economy to a clean free and inexhaustible one In this timely book author B la Lipt k explains why a solar hydrogen economy is technically feasible and cost effective He first outlines existing conservation technologies and renewable energy processes as well as evolving technologies such as energy free homes roof shingle solar collectors and RFCs He goes on to discuss energy optimization techniques that could reduce the global energy consumption by one third and finally presents the detailed design of a full size solar hydrogen power plant It is time to harness the power of solar energy With global energy consumption quadrupling in the last fifty years and atmospheric carbon dioxide reaching the highest level ever recorded now is the time to prevent further damage to the planet and ensure the survival of human civilization It is debatable how much time we have before our fossil and uranium deposits are exhausted It is also debatable how much climate change we can live with or how much of our economic resources should be devoted to stabilizing and reversing mankind's growing carbon footprint What is not debatable is that our resources are exhaustible and that we must not give reason for our grandchildren to ask Why did you not act in time Kiplinger's Personal Finance Magazine ,2006-02
